## Introduction

The Worldpay Payments Plugin for Magento 2 is highly customisable and offers a comprehensive suite of payment and admin features, and we built it with your integration and business needs in mind. It features:

- **Quick and easy installation.** Clear, succinct documentation enables developers to be as productive as possible
- **Lowest possible PCI DSS burden.** We'll help you reach and maintain compliance with minimum effort
- **Full support whenever you need it.** Our support teams are there for you – 24/7 for payment incident support and 24/5 for any other issues. Please get in touch with your Worldpay support contact. If they're not available, call our customer service team on 0800 096 3997.

## Overview of features

The table below lists the main features of our plugin.

Features	Description
<b>Supported credit cards</b>	Visa, MasterCard, Maestro, American Express, Diners, Discover, JCB, Carte Bancaire, Carte Bleue, Dankort
<b>3DS authentication</b>	3D Secure authentication (strong customer authentication) for direct credit card integration and hosted payment pages.
<b>Exemption engine</b>	Request real-time risk analysis of transactions to exempt as many as possible from strong customer authentication.
<b>Tokenization</b>	Token creation for sending authorization requests with stored card details that are PCI compliant.
<b>Stored credentials</b>	With detailed ways of improving authorisation rates and ensuring compliance.
<b>Stored credentials: disclaimer message</b>	Ask for shoppers' consent before saving their card during checkout.
<b>Hosted payment page</b>	Redirection to the PCI-compliant payment page that Worldpay hosts.
<b>Apple Pay and Google Pay</b>	Process Apple Pay and Google Pay payments.
<b>Google Chrome: payment service API</b>	A payment service API for Chrome that helps shoppers with express checkout.
<b>MOTO</b>	Your customer service team can make mail orders and telephone orders using the Create Order interface in Magento.

<b>Supported APMs</b>	PayPal, Klarna, Union Pay, IDEAL, Qiwi, Yandex, GiroPay, Boleto Bancairo, AliPay, SEPA, P24, Mistercash/Bancontact, Sofort/Pay.Now
<b>Instant page checkout</b>	Express checkout
<b>Multiple partial capture</b>	Support for multiple partial capture with Worldpay, allowing you to ship goods as they are available and capture only the funds required at that time.
<b>Merchant profile override</b>	Override your merchant profile so you can (for example) support different payment methods in different stores using one merchant ID.
<b>Repeat payments</b>	Support for regular payments (such as subscriptions) and for recurring orders.

## Before you start

**Prerequisite:** You need to have installed and correctly set up your Magento 2 store. If you have any problems with your Magento set-up, please visit the [Magento support centre](#).

## How to get started

Make sure your Implementation Manager or support contact has given you:

- A merchant code (or codes)
- A username and password for the [Worldpay Merchant Administration Interface](#)

Once you receive your login credentials to login to the [Merchant Administration Interface](#), follow the steps below to configure your XML connection credentials:

1. Click **ACCOUNT**, then select **Profile** from the top menu.
2. Note your new username for the connection.
3. Click the pencil icon next to **XML Password**.
4. Enter your new password and click **Save XML Password**.

## If you need support

Please get in touch with your Worldpay support contact. If they're not available, call our customer service team on 0800 096 3997.

## Basic configuration

After you've installed the extension, follow this menu path to configure it:

Stores/Configuration/Sales/Worldpay

## General Configuration

<b>Enable Worldpay</b> [store view]	Yes
<b>Environment Mode</b> [store view]	Test Mode
<b>Test URL</b> [store view]	https://secure-test.worldpay.com/jsp/merchant/xml/paymentSer
<b>Live URL</b> [store view]	https://secure.worldpay.com/jsp/merchant/xml/paymentService.
<b>Merchant Code</b> [store view]	XXXXXX
<b>XML Username</b> [store view]	XXXXXX
<b>XML Password</b> [store view]	.....
<b>Enabled Logging</b> [store view]	Yes
<b>Auto Invoice</b> [store view]	Yes
<b>Payment Method Selection</b> [store view]	Radio Buttons
<b>Description</b> [store view]	WorldPay Order

The table below describes all the fields, and what you'll need to input to complete basic configuration.

Features	Description
<b>Enable Worldpay</b>	When set to <b>Yes</b> , shoppers will be able to process transactions using the Worldpay Payment Gateway at checkout.
<b>Environment Mode</b>	Toggles between test and live modes. Set it to <b>Live</b> after testing is completed and before production launch.
<b>Test URL</b>	The Worldpay test environment's URL.
<b>Live URL</b>	The Worldpay production environment's URL.
<b>Merchant Code</b>	Your Worldpay merchant code, which your Worldpay support contact provides.
<b>XML Username</b>	Your Worldpay XML username, which you will find in <a href="#">the Worldpay Merchant Admin Interface</a> .

<b>XML Password</b>	Your Worldpay XML password, which you can set in <a href="#">the Worldpay Merchant Admin Interface</a> .
<b>Enable Logging</b>	If this is enabled, all requests and responses, along with other debug information, are logged at the <b>Magento2Root/var/log/worldpay.log</b> file. You should disable logging on production and enable it on staging for debugging. If you are troubleshooting, you might be asked to enable this feature.
<b>Auto Invoice</b>	If set to <b>Yes</b> , Magento automatically creates an invoice. This occurs so long as Worldpay authorises the transaction and sends a Capture request. If set to <b>No</b> , an invoice will not be created until a capture order notification is received.
<b>Payment Method Selection</b>	This has two options: payment methods can either be displayed as radio buttons or dropdowns in the payment section.

## Main configurations

### Credit card configurations

The screenshot and the table below it describe your options for setting credit card configurations. The blue highlighted fields in the screenshot below show that you can select multiple items.

<b>Enabled</b> [store view]	Yes
<b>Title</b> [store view]	Credit Cards
<b>Integration Mode</b> [store view]	Direct
Set Hosted payment page by selecting Redirect	
<b>Payment Methods</b> [store view]	<ul style="list-style-type: none"> <li>American Express</li> <li>Visa</li> <li>MasterCard</li> <li>Carte Bancaire</li> <li><b>Carte Bleue</b></li> <li>Dankort</li> <li><b>Diners</b></li> <li>Discover</li> <li>Japanese Credit Bank</li> <li><b>Maestro</b></li> </ul>
<b>Client Side Encryption Enabled</b> [store view]	Yes
<b>Public Key</b> [store view]	<pre>1#10001#974e5d91f60afeeab06fa8d8f936717d19f842a344f052 94cf05e8f0ae7ece7113c970bf6f9d5090421c5122408ac8b2933 35fdd72202534227bf71d7d6bbec984be8ce4f743f6d32bdc7254 0ca8f0f847153ad9cbc421e56321790c4ad60e080d76857b89489 e1b368bc3922b59cc14d0831b72581a9ee9759fbf61b0455fda07 ... (truncated)</pre>
<b>Require CVC</b> [store view]	Yes

Credit card configuration	Description
<b>Enabled</b>	When set to Yes, credit card payments are available to shoppers at checkout.

<b>Title</b>	The title that appears above the credit card payment section at checkout.
<b>Integration Mode</b>	<p>There are two integration modes for credit cards:</p> <ol style="list-style-type: none"> <li>1. <b>Direct integration mode</b></li> </ol> <p>Card information is saved at the Magento online store and passed to Worldpay by server-to-server transfer in XML format. No card information is saved by the Worldpay plugin. This integration requires the highest level of PCI DSS compliance.</p> <ol style="list-style-type: none"> <li>2. <b>Redirect integration mode</b></li> </ol> <p>The shopper will be redirected to the Worldpay payment page, and their card information will be captured at the Worldpay end. This integration requires the lowest level of PCI DSS compliance.</p>
<b>Payment Methods</b>	Select which credit cards are available to shoppers at checkout.
<b>Client Side Encryption Enabled</b>	If enabled, all card details are securely transferred to Worldpay in encrypted format. This is only required when using the direct integration mode. Using CSE with direct integration reduces the level of PCI DSS compliance that's required.
<b>Public Key</b>	Only required if client-side encryption is enabled. You can get this key from the <a href="#">Worldpay Merchant Admin Interface</a> . If you do not see the option for it, contact your Worldpay representative for help.
<b>Require CVC</b>	If enabled, a mandatory CVC form field appears in the card-detail entry form.

## Order notifications

Note: You must set up order notifications to make sure this plugin works properly.

Order notifications are transaction-status updates that Worldpay pushes to the Magento store.

To enable your Magento store to receive order notifications, you need to enter the URL below in your Worldpay merchant profile:

<https://<brand url>/worldpay/notification/index>

Configuration Details   Merchant Environment   **Merchant Channel**   Installations   3DS Flex   Client Side Encryption   Apple Pay   Android Pay   Samsung Pay

### Merchant Channels for Merchant SAPIENTNITROECOMMERCEV1

Merchant Channels (Production)								
Protocol	Active	Content	Address	Method	Response	Client Certificate	Send Idempotency Key	
email	<input checked="" type="radio"/> yes <input type="radio"/> no	cgi	mgulati@sapient.com;rhuta.patel@worldpay.com		[OK]	<input type="radio"/> yes <input checked="" type="radio"/> no	<input type="radio"/> yes <input checked="" type="radio"/> no	
http	<input checked="" type="radio"/> yes <input type="radio"/> no	xml	https://wpmage.uk/worldpay/notification/index/	POST		<input type="radio"/> yes <input checked="" type="radio"/> no	<input type="radio"/> yes <input checked="" type="radio"/> no	
shopper email	<input type="radio"/> yes <input checked="" type="radio"/> no	text	<input type="button" value="Configure AUTHORISED"/> <input type="button" value="Configure REFUSED"/>					

Merchant Channels (Test)								
Protocol	Active	Content	Address	Method	Client Certificate	Send Idempotency Key		
email	<input checked="" type="radio"/> yes <input type="radio"/> no	cgi	enatarajan1@sapient.com;nsatyaj					
http	<input checked="" type="radio"/> yes <input type="radio"/> no	xml	https://wpgqa.wpmage.uk/worldpay/notification/index/	POST	<input type="radio"/> yes <input checked="" type="radio"/> no	<input type="radio"/> yes <input checked="" type="radio"/> no		
shopper email	<input type="radio"/> yes <input checked="" type="radio"/> no	text	test uses the same messages and content settings as production					

If transactions are being processed asynchronously, you may notice some details of the transaction among your Magento order details.

The fully updated order details (Sales/Orders/Order View/Information) appear after Magento has received the order notification from Worldpay. Under **Payment Information** you should see:

## Payment Information

Alternative Payment methods

The order was placed using GBP.

Worldpay Order Id **000000051-1583918751**  
 Payment Status **SENT\_FOR\_AUTHORISATION**  
 Payment Model **Redirect**  
 Payment Method **KLARNA-SSL**  
 Card Number  
 AVS Result  
 CVC Result  
 Basic Risk Score

## Shipping & Handling Information

**Flat Rate - Fixed £5.00**

## Intelligent Account Verification (IAV)

Intelligent Account Verification (IAV) is a feature to validate a credit card.

Cardholders submit a zero or nominal value (a payment with a value greater than zero) while Worldpay determine the amount with the best chance of approval. Any value above zero is automatically reversed following verification.

The processing of a nominal value (or zero) is an important part of verifying that an account is real and set up for transactions. Contact Worldpay Support to enable IAV for your company or organization.

## How to configure IAV

Follow the steps below:

1. Go to Admin > Configuration->Sales->Worldpay->Credit Cards->Enable Intelligent Account Verification.  
 The screen should appear similar to the screenshot below.

## Credit Cards

Enabled [store view]	Yes
Enable Intelligent Account Verification [store view]	Yes
Title [store view]	Credit Cards

The shopper can save a new card through Intelligent Account Verification or through zero-authorization.

All form validations are handled through Custom labels and Custom Alert messages.

To configure alerts/show customized messages, do the following:

1. Go to Store/Settings/Configuration/Sales/Worldpay Exception Codes.
2. The default alert messages are under *Customize Account Level Messages*. You can customize these messages and the custom message box.

IAVMA1	Please verify the Billing Address in your Address Book before adding new card	
IAVMA2	Are you sure you want to delete the card? Once the card is deleted, subscriptions associated with it will be cancelled	
IAVMA3	The card has been added	
IAVMA4	Your card could not be saved	
<b>Add</b>		

3. Click **Save Config** after updating the configurations.

Use the information in the table below to add the configurations above.

Message Code	Actual Message	Custom Message
IAVMA1	Please verify the Billing Address in your Address Book before adding new card	
IAVMA2	Are you sure you want to delete the card? Once the card is deleted, subscriptions associated with it will be cancelled	
IAVMA3	The card has been added	
IAVMA4	Your card could not be saved	

### Manage/Customize labels

To manage/customize labels do the following:

1. Go to Store/Settings/Configuration/Sales/Worldpay Custom Labels.
2. The default labels are under *My Account Labels*, you can customize these labels as well as the custom message box.

IAVAC1	Add New Card	
IAVAC2	Card type	
IAVAC3	Default Billing Address	
Add		

3. Click **Save Config** after updating the configurations.

Use the information in the table below to add or update the above configurations.

Message Code	Actual Message	Custom Message
--------------	----------------	----------------

<b>IAVAC1</b>	Add New Card	
<b>IAVAC2</b>	Card type	
<b>IAVAC3</b>	Default Billing Address	

## Shopper experience

A new form is added for saving new credit cards under Login->My Account->Saved cards->Add new card.  
See the screenshot below.

- My Account

## Key XML update

Worldpay IAV with zero authorisation amount for saving new card.

```
<paymentDetails action="ACCOUNTVERIFICATION">  
  
<amount currencyCode="EUR" exponent="2" value="0"/>
```

The card is saved if ((lastEvent == 'AUTHORISED') || ((lastEvent == 'CANCELLED') &&

(riskScore[value] < 100 || riskScore[finalScore]< 100)) ) else, card is not saved in shoppers account.

Note: IAV works with AVS, CVC, 3DS, and checks made by a Worldpay fraud detection service, where available.

## How to configure 3DS

3DS Flex is the most advanced product on the market for 3-D Secure (3DS). It helps to increase issuer approvals for transactions affected by PSD2. For full details, and to download the user PDF, visit the [3DS Flex web page](#).

To use 3DS authentication, you must enable and configure 3DS at

Admin/Stores/Configuration/Sales/Worldpay

Under the Credit Card 3DS Authentication tab you will see the following 3DS configuration panel:

### Credit Card 3DS Authentication

Activate 3DS Authentication [store view]	<input type="text" value="No"/> <span style="font-size: small;">▼</span>
---	--

## Activate 3DS

1. Set **Activate 3DS Authentication** to **Yes** or **No**.

### Credit Card 3DS Authentication

Activate 3DS Authentication [store view]	<input type="text" value="Yes"/> <span style="font-size: small;">▼</span>
Enable 3DS1 Authentication [store view]	<input type="text" value="No"/> <span style="font-size: small;">▼</span>
Enable 3DS2 Authentication [store view]	<input type="text" value="No"/> <span style="font-size: small;">▼</span>

2. If **Activate 3DS Authentication** is set to **Yes**, then set **Enable 3DS1 Authentication** to **Yes** or **No**.

### Credit Card 3DS Authentication

Activate 3DS Authentication [store view]	<input type="text" value="Yes"/> <span style="font-size: small;">▼</span>
Enable 3DS1 Authentication [store view]	<input type="text" value="Yes"/> <span style="font-size: small;">▼</span>
Enable 3DS2 Authentication [store view]	<input type="text" value="No"/> <span style="font-size: small;">▼</span>

3. If **Activate 3DS Authentication** and **Enable 3DS1 Authentication** are both set to **Yes**, then set **Enable 3DS2 Authentication** to **Yes** or **No**.

## Credit Card 3DS Authentication

Activate 3DS Authentication [store view]	<input type="button" value="Yes"/>
Enable 3DS1 Authentication [store view]	<input type="button" value="No"/>
Enable 3DS2 Authentication [store view]	<input type="button" value="Yes"/>

4. If Activate 3DS Authentication is set to Yes, Enable 3DS1 Authentication is set to No, and Enable 3DS2 Authentication is set to Yes, you can then configure 3DS2.

**Note:** If you enable both 3DS1 and 3DS2, the Worldpay gateway will detect the right authentication for the credit card.

### ⌚ Configure 3DS2

JWT Event URL [store view]	<input type="button" value="https://secure-test.worldpay.com"/> <small>For Live Use Cardinal Commerce URL, For Test Use https://secure-test.worldpay.com</small>
JWT Api key [store view]	<input type="button" value="fa2daee2-1fbb-45ff-4444-52805d5cd9e0"/>
JWT Issuer [store view]	<input type="button" value="5bd9e0e4444dce153428c940"/>
Organisational Unit Id [store view]	<input type="button" value="5bd9b55e4444761ac0af1c80"/>
Test DDC URL [store view]	<input type="button" value="https://secure-test.worldpay.com/shopper/3ds/ddc.html"/>
Production DDC URL [store view]	<input type="button" value="https://centinelapi.cardinalcommerce.com/V1/Cruise/Collect"/>
Risk Data [store view]	<input type="button" value="Yes"/>
Authentication Method [store view]	<input type="button" value="None"/>
Test Challenge URL [store view]	<input type="button" value="https://secure-test.worldpay.com/shopper/3ds/challenge.htm"/>
Production Challenge URL [store view]	<input type="button" value="https://centinelapi.cardinalcommerce.com/V2/Cruise/StepUp"/>
Challenge Preference [store view]	<input type="button" value="None"/>
Challenge Window Size [store view]	<input type="button" value="Iframe"/>

See the sample values in the image above to configure 3DS2. After configuration, you must clear the Magento cache: `php bin/magento cache:clean`

Configuration	Description
<b>Enable 3DS2 Authentication</b>	This enables or disables the 3DS2 feature. If 3DS2 is disabled, orders will be placed by 3DS1 (if 3DS has been enabled). If both are disabled then the order will be placed by normal credit card authorisation.
<b>JWT Event URL</b>	<p>This is for capturing the session ID from the domain.  For production mode, please use:  <a href="https://centinelapi.cardinalcommerce.com">https://centinelapi.cardinalcommerce.com</a>.  For test mode, please use: <a href="https://secure-test.worldpay.com">https://secure-test.worldpay.com</a></p>
<b>JWT API Key, JWT Issuer and Organisational Unit ID</b>	Worldpay supplies these values. You must contact your Worldpay representative to register you for 3DS2.
<b>Test DDC (Device Data Collection) URL</b>	This is for creating the JWT session ID. For test mode, use: <a href="https://secure-test.worldpay.com/shopper/3ds/ddc.html">https://secure-test.worldpay.com/shopper/3ds/ddc.html</a> .
<b>Production DDC URL</b>	To create the JWT session ID in production mode, use: <a href="https://centinelapi.cardinalcommerce.com/V1/Cruise/Collect">https://centinelapi.cardinalcommerce.com/V1/Cruise/Collect</a>
<b>Risk Data*</b>	If this is enabled, the plugin provides additional information to Worldpay to reduce the chances that the shopper is challenged.
<b>Authentication Method</b>	<p>This is added as risk data. It is a mechanism to authenticate shoppers:</p> <ul style="list-style-type: none"> <li>guestCheckout: the shopper is not authenticated</li> <li>localAccount: you authenticate the shopper using your own systems</li> <li>federatedAccount: you authenticate the shopper using a Federated ID</li> <li>fidoAuthenticator: you authenticate the shopper using FIDO Authenticator</li> <li>issuerCredentials: you authenticate the shopper using issuer credentials</li> <li>thirdPartyAuthentication: you authenticate the shopper using third-party authentication.</li> </ul>
<b>Test Challenge URL</b>	This is the URL for the challenge page. For test mode, please use: <a href="https://secure-test.worldpay.com/shopper/3ds/challenge.html">https://secure-test.worldpay.com/shopper/3ds/challenge.html</a>
<b>Production Challenge URL</b>	This is the URL for the challenge page. For production mode, please use: <a href="https://centinelapi.cardinalcommerce.com/V2/Cruise/StepUp">https://centinelapi.cardinalcommerce.com/V2/Cruise/StepUp</a>
<b>Challenge Preference</b>	<ul style="list-style-type: none"> <li>noPreference: You have no preference about whether a challenge is performed.</li> <li>noChallengeRequested: You prefer that no challenge is performed.</li> <li>challengeRequested: You prefer a challenge to be performed.</li> <li>challengeMandated: There are local or regional mandates that mean that a challenge must be performed. This is an optional field.</li> </ul>

<b>Challenge Window Type</b>	The 3DS2 challenge form redirects shoppers either to a full page or an iframe. The <i>Full Page</i> redirects them to either Worldpay or Cardinal. The <i>Iframe</i> challenge form appears in the same page.
------------------------------	---

**Note:** 3DS2 works with both Direct and Redirect modes. You can enable the integration mode at Stores/Configuration/Sales/Credit Cards. Please see Main configurations.

## Credit card configurations

For a detailed view of risk data, go to Sales/Orders/Order View/Information and look under Payment Information:

### Payment & Shipping Method

## Previously saved card not working after 3DS2 activation

If a shopper has saved their card before 3DS2 activation, they must update the card details in their My Account section. This is because the token created earlier may not work with 3DS2:

My Saved Card						
	Card Brand #	Card Number	Card Holder Name	Card Expiry Month	Card Expiry Year	
	ECMC	5454*****5454	Satya	3	2023	<a href="#">Update</a> <a href="#">Delete</a>
	ECMC	5555*****4444	Nitin	2	2027	<a href="#">Update</a> <a href="#">Delete</a>
	VISA	4111*****1111	Avishek	2	2022	<a href="#">Update</a> <a href="#">Delete</a>
	AMEX	3434*****3434	3D	6	2025	<a href="#">Update</a> <a href="#">Delete</a>

**Note:** Card details are not saved. Only the token is saved at the Magento level.

## US and Canadian domestic acquiring

This section covers features that only apply to merchants in the US and Canada.

### Issuer Insights

This section describes the additional data available once Issuer Insights is enabled by WorldPay.

To view Issuer Insights, do the following:

1. Go to Sales/Order, and click **View**.

## Orders

## ACH Direct Debit (USA Only)

This section describes how to configure ACH Direct Debit (USA domestic wire transfer) to your integrations.

**Note:** This is applicable only for the USA. You must have a US domestic bank account to use this feature.

To configure the system for ACH pay, do the following:

1. Go to Store/Settings/Configuration/Sales/Worldpay.

## Alternative Payment Method

Enabled  
[store view]

Payment Methods  
[store view]

- PayPal
- SoFort EU
- GiroPay
- Boleto Bancario
- AliPay
- SEPA (One off transactions)
- Klarna (Redirect)
- P24
- Mistercash/Bancontact
- ACH Pay**

ACH Account Types  
[store view]

- Checking
- Savings
- Corporate
- Corp Savings

Title  
[store view]

2. Use the information in the table below to complete the configuration.

Configuration	Description
<b>Enabled</b>	Set to <b>Yes</b> , this will enable alternative payment method.
<b>Payment Methods</b>	Select <b>ACH Pay</b> from the options provided. This feature is only available for USA.
<b>ACH Account Types</b>	Configure the available bank account types.

3. You can add the configuration to manage alerts/show customized messages by following below steps.

- a. Go to Store/Settings/Configuration/Sales/Worldpay Exception Codes
- b. Under *Customize Admin Worldpay Configuration Messages*, click the **Add** button and then add the below configurations.

AACH01  
Void Sale Action Failed!!!

AACH02  
Void Sale executed Successfully!!! Please run Sync Status after sometime.

Add

You must click **Add** after you add the configurations.

Use the table below to add the configurations in the screenshot above.

Message code	Actual message	Custom message
AACH01	Void Sale action failed	
AACH02	Void Sale executed Successfully. Please run Sync Status after sometime.	

Under *Customize Checkout Messages*, you must click the **Add** button and then add the below configurations.

CACH03

Maximum allowed length of 17 exceeded

CACH04

Required length should be 8 or 9

CACH05

Maximum allowed length of 15 exceeded

CACH06

Maximum allowed length of 40 exceeded

**Add**

You must click **Add** after adding the configurations.

Use the information in the table below to add the above displayed configurations:

Message code	Actual message	Custom message
CACH03	Maximum allowed length of 17 exceeded	
CACH04	Required length should be 8 or 9	
CACH05	Maximum allowed length of 15 exceeded	
CACH06	Maximum allowed length of 40 exceeded	

4. In some cases, you may wish to void a sale request, this must be done within the same US business day as the sale request.
  - a. To void a sale request, go to Sales/Orders
  - b. Search for the order id shared by the shopper (For ex: 000000504.)

## Orders

## The shopper's experience

Once you have configured your system, it has the following effects on your shoppers:

Shoppers see seven new fields in the alternative payment methods section on selecting ach pay:

- Bank Account Types
- Account Number
- Routing Number
- Check Number
- Company Name
- Email Address
- Purpose of transaction text box

<input checked="" type="radio"/> Alternative Payment Methods	We Accept	    
<input type="radio"/>  <input type="radio"/>  <input type="radio"/>  <input checked="" type="radio"/>  <input type="radio"/> 		
<b>Bank Account Types *</b> <input type="button" value="Select Account Type"/>		
<b>Account Number *</b> <input type="text"/>		
<b>Routing Number *</b> <input type="text"/>		
<b>Check Number</b> <input type="text"/>		
<b>Company Name</b> <input type="text"/>		
<b>Email Address</b> <input type="text"/>		
<b>Purpose of transaction</b> <input type="text"/>		
<p><b>Purpose of transaction</b> will reflect on your statement, only if it is supported by the selected payment method. <b>Purpose of transaction</b> will be validated by the payment method before processing. Please adhere to the <b>Statement Narrative</b> guidelines of the selected payment method before entering the <b>Purpose of transaction</b>.</p>		

The ACH Pay-specific fields appear once the admin has enabled them, and if the billing address is US.

ACH Pay-specific field	Storefront validation
<b>Bank Account Types</b>	Select box will appear. Values for selection will depend on account types configured by admin.
<b>Account Number</b>	Accepts only digits up to 17.
<b>Routing Number</b>	Accepts only digits with minimum length 8 and maximum length 9.
<b>Check Number</b>	Accepts only digits up to 15.
<b>Company Name</b>	Accepts string with maximum length of 40 characters.
<b>Email Address</b>	Accepts standard email validation.
<b>Purpose of transaction</b>	Accepts alphanumeric characters which will be truncated to 15 characters while sending the request.

**Note:** ACH Pay is available only in direct integration mode.

## Prime Routing (USA Only)

This section describes how to configure Prime Routing to your integrations.

**Note:** This is applicable only for USA and works only in direct integration mode. Once Prime Routing is enabled, the request is treated as a Sales request.

To configure prime routing, do the following:

1. Go to Store/Settings/Configuration/Sales/Worldpay.

Prime Routing

Enable Prime Routing [store view]	Yes
Enable Advanced Prime Routing [store view]	Yes
Enable Advance Prime Routing to make use of Routing Preference and Debit Networks.	
Routing Preference [store view]	pinlessDebitOnly
Debit Networks [store view]	Accel AFFN CU24 Jeanie NYCE Pulse Shazam Star SouthEast Star West Star NorthEast
<input type="checkbox"/> Use system value	

2. Use the information in the table below to complete the configuration:

Configuration	Description
<b>Enable Prime Routing</b>	Set to <b>Yes</b> , this enables the prime routing feature.
<b>Enable Advanced Prime Routing</b>	Set to <b>Yes</b> , this allows you to configure the routing preference and debit networks.
<b>Routing Preference</b>	This lets you configure the routing preference to specify how a particular transaction should be routed.
<b>Debit Networks</b>	This lets you configure the debit networks to specify how a particular transaction should be routed.

3. You can add the configuration to manage alerts/show customized messages by following below steps.
- Go to Store/Settings/Configuration/Sales/Worldpay Exception Codes.
  - Under Customize Admin Worldpay Configuration Messages, you must click on the **Add** button and then add the below configurations.

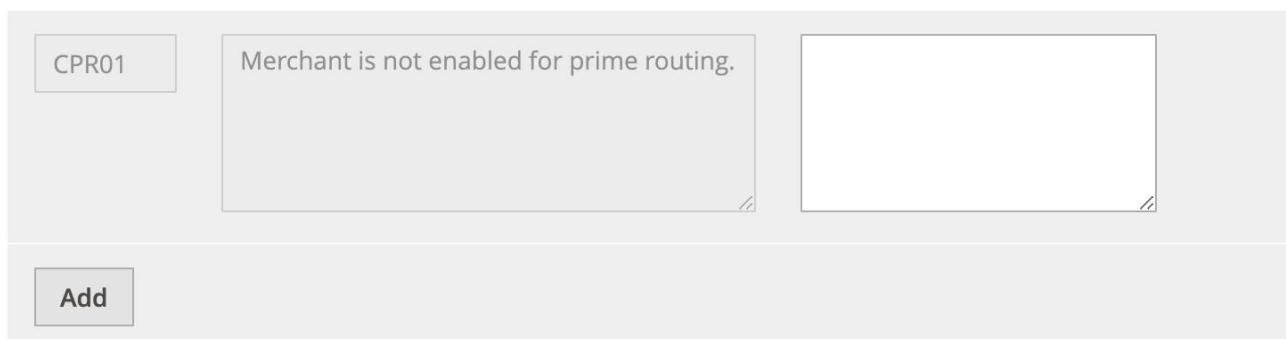

AACH01	Void Sale Action Failed!!!	
AACH02	Void Sale executed Successfully!!! Please run Sync Status after sometime.	
<b>Add</b>		

You must click **Save Config** after adding the configurations.

Use the below table for adding the above displayed configurations.

Message code	Actual message	Custom message
<b>AACH01</b>	Void Sale action failed	
<b>AACH02</b>	Void Sale executed Successfully Please run Sync Status after sometime.	

- C. Under Customize Checkout Messages, you must click the **Add** button and then add the below configurations.

You must click **Save Config** after adding the configurations.

Use the below table for adding the above displayed configurations.

Message code	Actual message	Custom message
CPR01	Merchant is not enabled for prime routing.	

4. In some cases, you may wish to void a sale request, this must be done within the same US business day as the sale request.
  - a. To void a sale request, go to Sales/Orders
  - b. Search for the order ID shared by the shopper (e.g: 000000713.)

#### Orders

## Level 2/3 Data

Worldpay credit card processing data for VISA and MasterCard fall into two levels, when being passed by merchants: Level 1 and Level 2/3. Each level is defined by the amount of information that is required or passed as a set of additional data.

Level 1 processing has the lowest data requirements, but potentially the highest interchange fees. Level 2/3 processing demands card data that provides more information for business, commercial, corporate, purchasing, and government cardholders.

Credit card transactions submitted with Level2/3 card data can obtain lower interchange fees and provide merchants with a lower processing cost together with spending insights for shoppers. Naturally, it is in the best interest of merchants to submit Level 2/3 card data whenever possible.

You can supply Level 2 and Level 3 data through the following APIs:

- Direct XML (AUTHORISE and SALE)
- Redirect or HPP
- Capture or Refund batch request
- Capture or Refund order modification

## Qualification criteria

### MasterCard

- The transaction must be taxable
- Tax must be between 0.1% and 30% of the transaction amount
- For level 3 the transaction must use a corporate, business or purchasing card
- For level 3 at least one line item must be included

## Visa

- The transaction must be taxable
- Tax must be between 0.1% and 22% of the transaction amount
- For level 3 the transaction must use a corporate or purchasing card  Tax must be between 0.1% and 22% of the transaction amount
- For level 3 the transaction must use a corporate or purchasing card

**Note:** Qualification criteria are validated by the Worldpay gateway and not by the Magento 2 plugin.

## How to setup Level 2/3 Data:

Go to **Stores > Configuration > Sales > Worldpay: Level 2/3 Data for US and Canada Payments** [Configuring](#)

### Level 2/3 Data:

#### Level 2/3 Data for US and Canada payments

Enable Level 2/3 Data [store view]	Yes
Card Acceptor TaxId [store view]	tzx -21122
Duty Amount [store view]	2.98
Unit Of Measure [store view]	each

Configuration	Description
<b>Enable Level 2/3 Data</b>	Field to enable/disable the level 2/3 data for US & Canada Payments.
<b>Card Acceptor TaxId</b>	Must be between 1-20 characters (9 digits for US domiciled merchants).
<b>Duty Amount</b>	Duty Amount manageable by merchant for international shipping which has duties tax.
<b>Unit Of Measure</b>	Merchant can configure product's Unit of Measure, whose value is set as "each" by default. Unit of Measure will be passed on to Worldpay gateway.

**Product attribute values:** Browse Catalog/Products – For any product type

Level23 Data Configuration

commodity code [website]	CO-1212
Unit of Measure [website]	Apparel Size

Configuration	Description
<b>Commodity Code</b>	Commodity Code to be configured by merchant for each product.
<b>Unit of Measure</b>	Merchant configures product's Unit of Measure and this value will overwrite the default value set under Stores/ Configuration/Sales/Worldpay: Level 2/3 Data for US and Canada Payments.

**Note:** The Worldpay Magento 2 plugin adds two product attributes. These are *commodity code* and *Unit of measure* for all the product types to support level 2/3 data needs after installation.

### Sample Payment Request

## Latin American payments

This section describes how to add Latin American payments to your integrations, including payments by instalment.

**Prerequisite:** You must have a legal entity in each Latin American country that you want to trade in.

**Note:** Please contact your Worldpay representative to set up the appropriate routing for the countries you want to trade in.

List of countries:

The plugin supports payments from these countries:

- Argentina
- Bolivia
- Brazil
- Central America (Costa Rica, Nicaragua, El Salvador, Honduras, Panama, Guatemala)
- Chile
- Colombia
- Ecuador
- Mexico
- Peru
- Uruguay

## Latin America configurations

1. To begin the configuration: Go to Store/Settings/Configuration/Sales/Worldpay.

## Latin America Payments

**Enable CPF/CNPJ** [store view]  ▼

You must enable CPF/CNPJ for only Brazil as billing country

**Enable Instalment** [store view]  ▼

If set to "Yes", This will enable shopper to select installment before making their payment for Latin America country only.

Instalment Configuration	[store view]	Instalment Type	Country	Action
		Type 1 Installment	<input type="text" value="Argentina"/> <input type="text" value="Belize"/> <input type="text" value="Brazil"/> <input type="text" value="Chile"/> <span>...</span>	
		Add		

The following are the Instalment types:

- Type1-Up to 12 instalment is applicable to AR and BR.
- Type2-Up to 18 instalment in sequence: 3; 6; 9; 10; 12; 15 is applicable to MX.
- Type3-Up to 36 instalments in sequence: 3; 6; 9; 10; 12; 18; 24; 36; is applicable to CO.
- Type4-Up to 48 instalments in sequence: 3; 6; 9; 10; 12; 18; 24; 36; 48: is applicable to BZ,CL,CR,SV,GT,HN,NI,PA,PE.

2. Use the information in the table below to complete the configuration.

Configuration	Description
<b>Enable CPF/CNPJ</b>	Set to <b>Yes</b> , a shopper is only required to submit their CPF (Cadastro de Pessoas Físicas) and CNPJ (Cadastro Nacional da Pessoa Jurídica) ID number for payments originating in Brazil.*
<b>Enable Instalment</b>	Set to <b>Yes</b> , shoppers can pay in instalments. If set to <b>No</b> , instalments are not available. This feature is only available for Latin American countries.
<b>Instalment Configuration</b>	This enables you to do instalment-type mapping for Latin American countries.
<b>Instalment Type</b>	Type1 up to 12 instalments are applicable to Argentina and Brazil. Type2 up to 18 instalments (3, 6, 9, 10, 12, 15) are applicable to Mexico. Type3 up to 36 instalments (3, 6, 9, 10, 12, 18, 24, 36) are applicable to Colombia.
	Type4 up to 48 instalments (3, 6, 9, 10, 12, 18; 24; 36; 48: are applicable to Brazil, Chile, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama and Peru.

\* You must only enable CPF for Brazilian payments.

3. Administrators can use the **Instalment** configuration to map countries with instalment types, and must apply the configurations in the table below:

Country	Permitted types of instalments
<b>Brazil and Argentina</b>	Up to 12 instalments.
<b>Mexico</b>	Up to 18 sequential instalments: 3, 6, 9, 10, 12, 15, 18.
<b>Columbia</b>	Up to 12 instalments without interest. Up to 48 instalments with interest. Sequential instalments: 3, 6, 9, 10, 12, 18, 24, 36, 48.
<b>Peru and Central America</b>	Up to 48 sequential instalments: 3, 6, 9, 10, 12, 18, 24, 36, 48.

## The shopper's experience

Once you have configured your system, it has the following effects on your shoppers:

Shoppers see three new fields in the credit-card payment section:

- CPF/CNPJ text box (only for Brazil)
- Instalments-type dropdown (only for LatAm countries)
- Purpose of transaction text box

Credit Cards      We Accept

Diners Club INTERNATIONAL    mastercard    VISA    AMERICAN EXPRESS    DISCOVER    maestro    JCB

Credit Card Type \*

Diners Club INTERNATIONAL     mastercard     VISA     AMERICAN EXPRESS     DISCOVER     maestro     JCB

Use Saved Card

Credit Card Number 

Card Holder Name

Month  Year 

CVV 

Save This Card ([Important Disclaimer!](#))

CPF/CNPJ \*

Instalment \*

Instalment 

Purpose of transaction \*

The Latin America-specific fields (**CPF/CNPJ, Instalment and Purpose of transaction**) appear once the admin has enabled them, and if the billing address is in one of the Latin American countries.

LatAm-specific field	Storefront validation
<b>CPF</b>	Accepts only digits up to 11.
<b>CPNJ</b>	Accepts only digits up to 14.
<b>Instalment</b>	Select box will appear. Values for selection will depend on selected billing country.
<b>Purpose of transaction</b>	Accepts a maximum of 13 alphanumeric characters.

## Recommendation for Brazil only

There are three variations of fields that should be visible for payments from Brazil:

1. Only CPF is enabled. (The **CPF** and **Purpose of Transaction** fields are visible.)
2. Only Instalments is enabled. (The **Instalment** and **Purpose of Transaction** fields are visible.)

Both CPF and Instalments are enabled. (The **CPF**, **Instalment** and **Purpose of Transaction** fields are visible.)

## Exemption engine

The Exemption Engine enables frictionless checkout during 3DS2 using transactional data to predict issuer behaviour. The engine requests real-time risk analysis of transactions to exempt as many as possible from SCA (strong customer authentication).

### How to configure the Exemption Engine

Go to Stores/Configuration/Sales/Worldpay/Exemption Engine:

#### Exemption Engine

<b>Enable Exemption Engine</b> <small>[store view]</small>	<input type="text" value="Yes"/> <span style="font-size: small;">▼</span>
<b>Exemption Placement</b> <small>[store view]</small>	<input type="text" value="OPTIMISED"/> <span style="font-size: small;">▼</span>
	<p>Optimised applies the exemption placement that has the highest probability of issuer acceptance as determined by the Exemption Engine.</p>
<b>Exemption Types</b> <small>[store view]</small>	<input type="text" value="OP - Optimised exemption"/> <span style="font-size: small;">▼</span>
	<p>OP has the highest probability of issuer acceptance determined by the Exemption Engine.</p>

Configuration	Description
<b>Enable Exemption Engine</b>	If set to <b>Yes</b> , transactions can be exempted from SCA, based on real-time risk analysis.
<b>Exemption Placement</b>	<b>AUTHORISATION:</b> Applies exemption in the authorization flow. <b>AUTHENTICATION:</b> Applies exemption in the authentication flow. <b>OPTIMISED:</b> Applies the exemption placement that has the highest probability of issuer acceptance as determined by the Exemption Engine.
<b>Exemption Types</b>	<b>LV:</b> Low-value exemption (less than 30 EUR) <b>LR:</b> Low-risk exemption. <b>OP:</b> Optimised exemption (highest probability of issuer acceptance determined by the Exemption Engine).

Additional information:

- In some cases the exemption might not be accepted by the issuing bank. If this occurs the shopper is required to go through authentication
  - If an exemption is allowed, the liability for the transaction rests with you and not the issuing bank
- Optimised** is the recommended *Placement and Types*

## FraudSight

Fraudsight combines unparalleled data insights, industry leading technology, and fraud prevention expertise. The result enables you to predict and prevent fraud.

Contact Worldpay Support to get FraudSight enabled on your system.

## Configure Fraudsight

Once FraudSight is enabled on your account it is automatically activated in your Magento plugin. To manage the Fraud related cases, the information in this section is important.

### Manage alerts and messages

To manage alerts/show customized messages do the following:

1. Go to Store/Settings/Configuration/Sales/Worldpay Exception Codes.
2. Under Customize Admin Worldpay Configuration Messages, click the **Add** button and then add the configurations below.

AFR01	Cancel Action Failed	
AFR02	Order cancelled successfully. Please run Sync Status after sometime.	
<input type="button" value="Add"/>		

3. Click **Save Config** after you add the configurations.

Use the information in the table below to add to the above configurations.

Message Code	Actual Message	Custom Message
AFR01	Cancel Action Failed	
AFR02	Order cancelled successfully Please run Sync Status after some time.	

## FraudSight Response

Fraudsight response has one of the following messages:

- low-risk

- review
- high-risk

To see this message, go to Sales/Orders, and the message appears under *FraudSight Message*.

	ID	Purchase Point	Purchase Date	↑	Bill-to Name	Ship-to Name	Grand Total (Base)	Grand Total (Purchased)	Status	Action	Signifyd Guarantee Decision	Allocated sources	Worldpay FraudSight Message
<input type="checkbox"/>	000001930	Main Website Main Website Store Default Store View	Dec 15, 2020 9:00:05 AM	QA User	QA User	€38.00	€38.00	Pending	<a href="#">View</a>				LOW-RISK
<input type="checkbox"/>	000001929	Main Website Main Website Store Default Store View	Dec 15, 2020 8:56:13 AM	Test Test	Test Test	€32.00	€32.00	Pending	<a href="#">View</a>				REVIEW

When the message is received it is “in review.” The message is highlighted in red, to show that you need to take action on this order. For more information, see Order Review.

You can also click **View** to see FraudSight data. The Advance Risk Provider is FraudSight and under *FraudSight Data*, you can see the message, score and reason codes if they are available.

## Order Review

When the message received is “in review”, you may want to cancel the order or start a capture request.

### Cancel an order

To cancel the order, do the following:

1. Go to Sales/Orders
2. Click the checkbox next to the order which has a message in review.

Orders											
	ID	Purchase Point	Purchase Date	Bill-to Name	Ship-to Name	Grand Total (Base)	Grand Total (Purchased)	Status	Action	Signifyd Guarantee Decision	FraudSight Message
<input type="checkbox"/>	000000179	Main Website Main Website Store Default Store View	Oct 1, 2020 3:09:35 AM	QA Test	QA Test	\$50.00	\$50.00	Pending	<a href="#">View</a>		LOW-RISK

The alert messages may vary depending on the availability of custom messages from the configuration.

## Capture

To send a capture request:

1. Click *Invoice* and select *Capture Online* to send a capture request.

If you have a Redirect integration and FraudSight is enabled, use different methods to get FraudSight data. These methods are to use either order-notification, or to send order-inquiry requests. For order-inquiry requests run *Sync Status*.

## Tokenization and stored credentials

Magento does not save credit card details. Instead, Worldpay creates a token against each card and sends it to Magento. When a shopper tries saving a card, the token generated by Worldpay is saved in the Magento database and this token is used for future authorizations. The shopper needs to save the card again when the token expires, and Worldpay then issues a new token.

### How to configure tokenization and stored credentials

You can enable tokenization at Stores/Configuration/Sales/Worldpay/Tokenization:

#### Tokenization / Stored Credentials

Save Card [store view]	<input type="text" value="Yes"/> <span>▼</span>
---------------------------	---

Saved card will work only if, at least one from Tokenization or Stored credentials is enabled.

Enable Tokenization [store view]	<input type="text" value="Yes"/> <span>▼</span>
-------------------------------------	---

Enable Stored Credentials [store view]	<input type="text" value="No"/> <span>▼</span>
---	--

Do the following:

1. Set **Save Card** to **Yes** or **No**. -Card-saving will work only if either *Tokenization* or *Stored Credentials* is enabled. Set *Enable Tokenization* to **Yes** or **No**.

#### Tokenization / Stored Credentials

Save Card [store view]	<input type="text" value="Yes"/> <span>▼</span>
---------------------------	---

Saved card will work only if, at least one from Tokenization or Stored credentials is enabled.

Enable Tokenization [store view]	<input type="text" value="Yes"/> <span>▼</span>
-------------------------------------	---

Enable Stored Credentials [store view]	<input type="text" value="Yes"/> <span>▼</span>
---	---

#### ⊕ Configure Disclaimer

- Set **Enable Stored Credentials** to **Yes** or **No**. If **Stored Credentials** is enabled, the required *usage* attribute is added, with values like FIRST and USED. This will also add the `transactionIdentifier` value of the FIRST response as `schemeTransactionIdentifier` in the USED request.

Read the [Worldpay online documentation](#) for more details about stored credentials.

Configuration	Description
<b>Save Card</b>	If set to <b>Yes</b> , the save card function is enabled so long as either Tokenization or Stored credentials is enabled.
<b>Enable Tokenization</b>	Write the message that shoppers see.
<b>Enable Stored Credentials</b>	If set to <b>Yes</b> , stored credentials are enabled and a token with long expiry time is created.

Additional information:

- A maximum of 16 cards can be saved under each authenticated shopper ID
- Tokenization/stored credentials must be enabled to ensure compliance when storing card details You can configure a disclaimer that shoppers must accept during checkout to save their card:

## ⓘ Configure Disclaimer

<b>Disclaimer Message</b> [store view]	<b>Show / Hide Editor</b>
<div style="border: 1px solid #ccc; height: 150px; width: 100%;"></div>	

<b>Show Disclaimer in Store Front</b> [store view]	<input type="radio"/> Yes	<input type="radio"/>
---	---------------------------	-----------------------

<b>Important Disclaimer Mandatory</b> [store view]	<input type="radio"/> Yes	<input type="radio"/>
---	---------------------------	-----------------------

Configuration	Description
<b>Enable Stored Credentials</b>	If set to Yes, stored credentials is enabled.
<b>Disclaimer Message</b>	Write the message that shoppers see.
<b>Show Disclaimer In Store Front</b>	If set to Yes, a pop-up link to the disclaimer message appears on the checkout page.

**Important Disclaimer Mandatory**

If set to Yes, the shopper must agree the disclaimer before they can save their card details.

**Note:** See the [Worldpay support centre](#) for more details about disclaimers.

**The shopper's experience with stored credentials enabled**

Once stored credentials and a disclaimer are configured, the shopper enters a flow in which they can save the card after verifying the disclaimer. See the two screenshots below:

The screenshot shows a payment interface for Worldpay. At the top, there is a section titled "Credit Cards Section" with the text "We Accept" followed by logos for various card networks: Diners Club International, MasterCard, VISA, American Express, Discover, CB, and Carte Bleue. Below this, there is a section for "Credit Card Type" with radio buttons for Diners Club International, MasterCard, VISA, American Express, Discover, CB, and Carte Bleue. There are also options for Maestro and JCB. A card number field contains "4111111111111111" and is associated with a VISA logo. The name "satya" is entered in the name field. The expiration date is split into "02 - February" and "2022". The CVV number "123" is entered in the CVV field. A checkbox labeled "Save This Card (Important Disclaimer!)" is checked. A red warning message at the bottom reads "Please, Verify the disclaimer! before saving the card".

Credit Cards Section   We Accept

PLACE ORDER

When the shopper clicks the **Important Disclaimer** link, they have the option to agree or disagree to the disclaimer. To both place order and save the card, the shopper must agree to the disclaimer.

If the shopper chooses to disagree to the disclaimer, the *Save This Card* option is unchecked and the order proceeds without any saved card details.

**Hosted payment page**

Shoppers can be redirected to a payment page hosted by Worldpay. To enable this, follow these steps:

## Credit Cards

**Enabled**  
[store view]  ▼

**Title**  
[store view]

**Integration Mode**  
[store view]  ▼

Set Hosted payment page by selecting Redirect

1. Go to Stores/Configuration/Sales/Worldpay/Credit Cards. Set Enabled to Yes and Integration Mode to Redirect.

## Hosted Payment Page

**Enabled**  
[store view]  ▼

**Installation Id**  
[store view]

**Hide address**  
[store view]  ▼

**Hosted Payment page Integration**  
[store view]  ▼

2. Go to Stores/Configuration/Sales/Worldpay/Hosted Payment Page. Set **Enabled** to **Yes** and enter your Worldpay Installation ID.

Configuration	Description
<b>Enabled</b>	When set to Yes, a redirection to the hosted payment page is available at checkout.
<b>Installation Id</b>	Enter the installation ID you should have received from Worldpay and that looks like: 1111111.
<b>Hide address</b>	Choose whether to hide the billing address of the shopper on the hosted payment page.
<b>Hosted payment page integration</b>	Choose whether the hosted payment page appears as an iframe or a complete page.

Once the hosted payment page is configured, shoppers can use this method as described below.

**Payment Method**

*All transactions are secure and encrypted.*

## Mobile Wallets

### Apple Pay

The Apple Pay mobile payment and digital wallet service enables customers to make payments in person, in iOS apps, and on the web. It is supported on the iPhone, Apple Watch, iPad and Mac.

#### Prerequisites

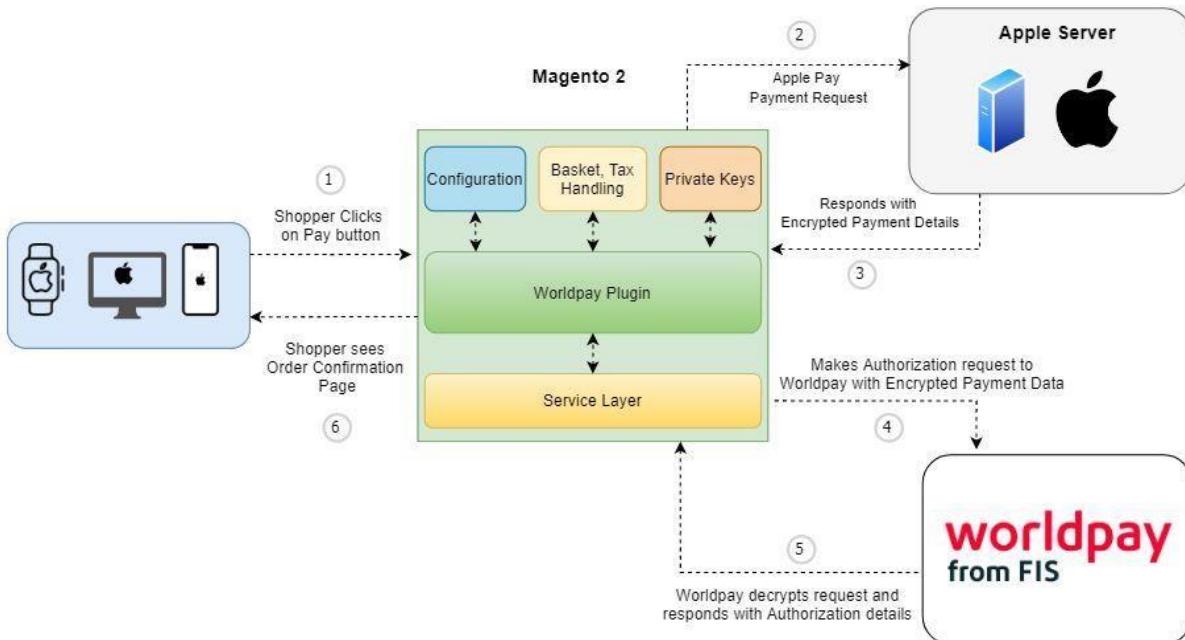

To enable Apple Pay for your customers, you'll need an Apple Developer account that is associated either with the Apple Developer Program or the Apple Developer Enterprise Program.

Your shoppers can only see Apple Pay as a payment option if they:

- Use an Apple Pay-compatible device
- Use Safari if they are paying on the web
- Are located in a country or region where Apple Pay is available

## How it works

You can see the transactional flow in the diagram below:

1. The shopper places the order.
2. Magento requests the encrypted payload from Apple Pay.
3. Apple Pay returns the encrypted payload after authentication.
4. Magento sends an XML Direct request for authorization to Worldpay, containing the encrypted Apple Pay data.
5. Worldpay sends the payment response to Magento.
6. The Magento plugin informs the shopper of the outcome.

## Implementation steps

1. [Create your merchant ID](#) (eg, `merchant.com.worldpay.merchantAccount`) then log in to your Worldpay merchant account.
2. Switch to the mode you'll be using (test or production), select **Integration** from the left-hand menu and **Apple Pay** in the top menu. You can see these details in the screenshot below:

Configuration Details Merchant Environment Merchant Channel Installations 3DS Flex Client Side Encryption **Apple Pay** Android Pay

### Apple Pay - Key Management for SAPIENTNITROECOMMERCEV1

**Current CSRs**

Creation Date	Apple Merchant ID	Certificate Sign Request	Change Status	Delete	Linked merchants
2020-01-09 10:28:29	merchant.com.publicissapient.ecom	<a href="#">Download csr file</a>	<a href="#">Enable</a>	<a href="#">Delete</a>	<a href="#">Manage</a>
2020-03-04 10:35:34	merchant.com.publicissapient.ecom.live	<a href="#">Download csr file</a>	<a href="#">Disable</a>	<a href="#">Delete</a>	<a href="#">Manage</a>

3. Enter your Apple merchant ID and click the **Generate** button (if not generated already). Now you can see the certificate signing request (CSR) that you generated. Download that file so you can create your payment-processing certificate.
4. [Enable Apple Pay](#) on the Apple developer website.
5. [Create a payment processing certificate](#) on the Apple developer website, but please note the following:
  - Make sure you enter the Apple merchant ID you created in step 1
  - Skip the step in which you create an Apple-generated CSR
  - Instead, select the Worldpay CSR you generated step 1
  - Download and save the payment processing certificate you generated (.cer file)
6. When you have completed the steps on the Apple developer website, send the payment processing certificate you downloaded to Worldpay. You'll then need to wait until Worldpay confirms that the certificate is activated.
7. [Register and validate your merchant domain](#) with Apple, making sure to use the Apple merchant ID you created in step 1.
8. [Create a merchant identity certificate](#)

For each transaction you must request a session from Apple using your merchant identity certificate. Please note the following when you create your Apply merchant identity certificate:

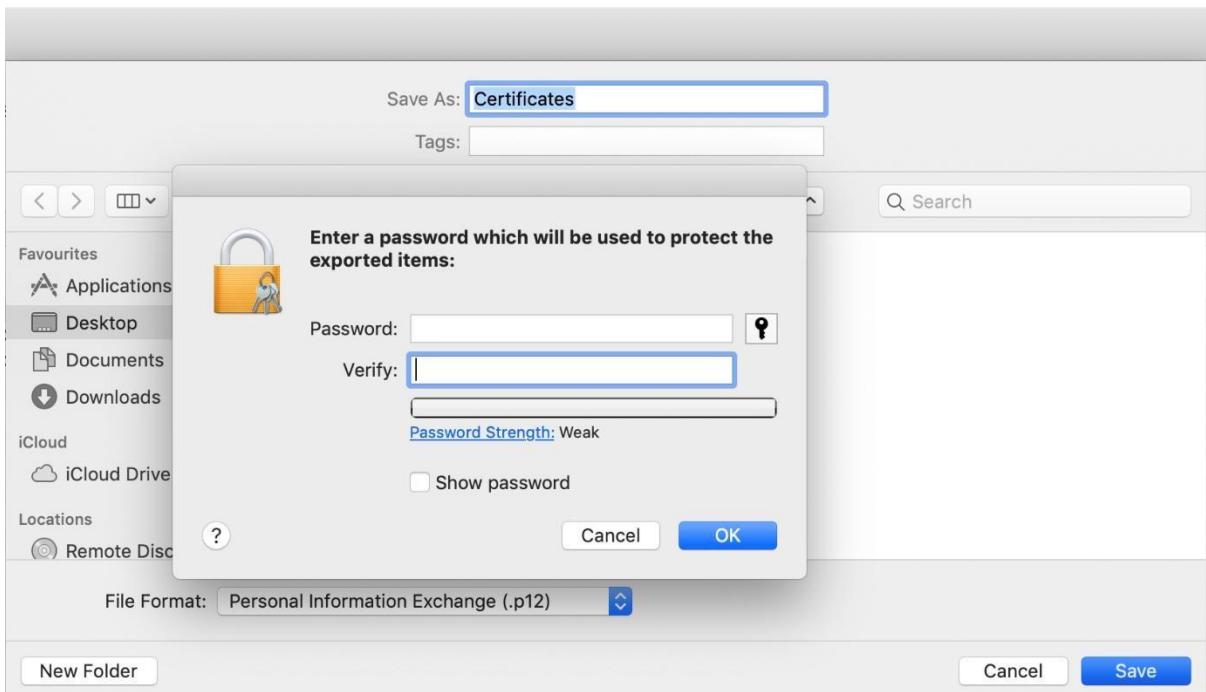

- When asked for your merchant ID, make sure you enter the Apple merchant ID you created in step 1
- Follow the instructions from Apple for creating a CS R yourself

**Note:** The CSR you generated from Worldpay can't be used for creating a merchant ID certificate. So generate a CSR of your own and use that to generate the merchant ID certificate:

1. Download and save the generated merchant ID certificate (.cer file).
2. When you have completed the instructions from Apple, add the merchant ID certificate to your keychain.
3. When you create your own CSR, you might also get a private key. Add that file too in your keychain app.
4. Export the merchant ID certificate from your keychain as a p12 file (see screenshot below).

5. Make a note of the password you entered in the field shown below

6. You must now convert your p12 file to a PEM file using the following command:

```
openssl pkcs12 -in ApplePayMerchantIdentity_and_privatekey.p12 -out ApplePay.crt.pem
-clcerts -nokeys
```

```
openssl pkcs12 -in ApplePayMerchantIdentity_and_privatekey.p12 -out
ApplePay.key.pem -nocerts
```

7. When you generate these files you may be asked for your password. If so, use the password you used in step 5. Upload both files to your server: eg, /var/www/html/apple-certs/
8. Use the following commands to verify the files:

```
openssl x509 -noout -modulus -in ApplePay.crt.pem | openssl md5
openssl rsa -noout -
modulus -in ApplePay.key.pem | openssl md5
```

9. The output of both commands should be the same. You can check this in the section below.

10. If the output of both commands is not the same, please double-check that you have followed all the previous steps accurately. If both outputs are the same, then you have enabled Apple Pay successfully.

## How to configure Apple Pay

Go to Magento Admin/Stores/Configurations/Sales/Worldpay

You should see the Apple Pay configuration in the Wallets section. Complete and save these configurations, as shown below, and customers will now be able to use Apple Pay at checkout.

### ⌚ Apple Pay

Enabled [store view]	<input type="text" value="Yes"/>
Certification Key [store view]	<input type="text" value="/var/www/html/webroot-apple/publicis_ecom_live_me1"/>
Location of the ApplePay.key.pem. eg. /var/www/html/cert/. Files should be have read access by the webserver	
Certification Path [store view]	<input type="text" value="/var/www/html/webroot-apple/publicis_ecom_live_me1"/>

**PLACE ORDER****Google Pay**

Google Pay lets your customers pay with a single click, using payment methods saved in their Google account.

1. The shopper places the order.
2. Magento requests the payment token from Google Pay.
3. Google Pay returns the payment token.
4. Magento sends an XML Direct request for authorization to Worldpay, containing the payment token.
5. Worldpay sends the payment response to Magento.
6. The Magento plugin informs the shopper of the outcome.

You can enable Google Pay payments, as seen in the screenshot below, at  
Admin/Stores/Configuration/Sales/Worldpay/Mobile Wallets

## Google Pay

Enabled [store view]	Yes
Payment Methods [store view]	American Express Visa Discover
Auth Methods [store view]	Pan Only Cryptogram 3ds
Gateway Name [store view]	worldpay
Gateway MerchantId [store view]	b21b1d14ba43077
Google MerchantId [store view]	
This field only required for production mode. This can be generated from merchant's Google account	
Google MerchantName [store view]	worldpay

The highlighted fields indicate that you can select multiple items.

**Note:** In order to use production mode, you must first submit a request to Google to have your account activated.

You will also need to set the configurations shown in the screenshot above:

Configuration	Description
<b>Enabled</b>	When set to Yes, Google Pay is available at checkout.
<b>Payment Methods</b>	Supported credit cards.
<b>Authentication Methods</b>	PAN_ONLY: Personal account number. CRYPTOGRAM_3DS:3D Secure authentication.
<b>Gateway Name</b>	Set this to worldpay
<b>Gateway MerchantId</b>	Your Worldpay merchant ID.
<b>Google MerchantId</b>	Your Google merchant ID.
<b>Google MerchantName</b>	You can configure this in your Google merchant account.

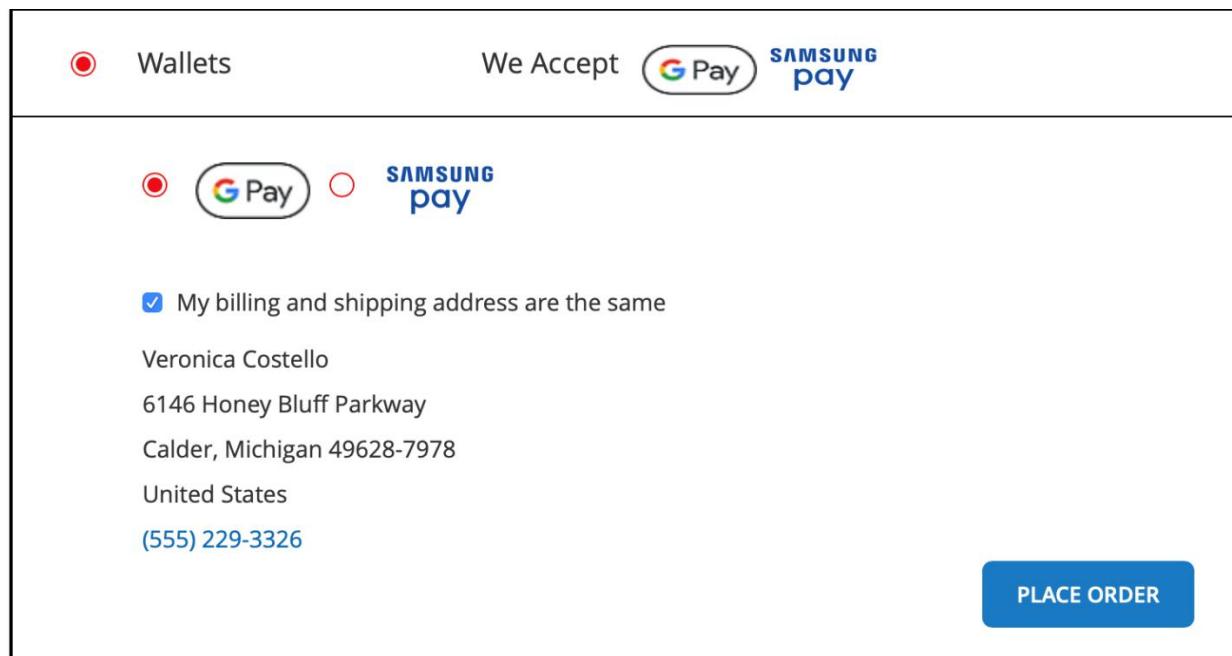

To change between test and production environments, go to the General Configuration section:

## General Configuration

Enable Worldpay [store view]	<input type="text" value="Yes"/>
Environment Mode [store view]	<input checked="" type="radio"/> Test Mode <input type="radio"/> Live Mode
Test URL [store view]	<input type="text" value="https://secure-test.worldpay.com/jsp/merchant/xml/payn"/>
Live URL [store view]	<input type="text" value="https://secure.worldpay.com/jsp/merchant/xml/payment"/>

## The shopper's experience

Once Google Pay is enabled, shoppers see it as an option at checkout:

After clicking the **Place Order** button, the shopper sees their saved card details in their Google account, if they have already signed in to their Google account. If they haven't signed in, Google asks them to.

If the shopper doesn't have a saved card in their Google account, they are asked to enter their card details.

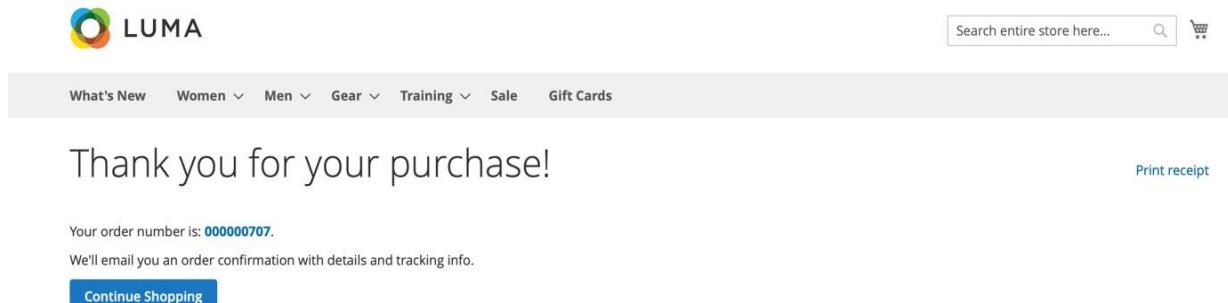

Nishikant Singh  
enishikant1@gmail.com

Mastercard .... 0007

**CONTINUE**

If the payment is approved by Google and Worldpay, the customer sees a success page:

The screenshot shows a Magento 2 storefront with a "LUMA" header. The main content area displays a "Thank you for your purchase!" message. Below it, the order number is listed as "Your order number is: **000000707**". A note states, "We'll email you an order confirmation with details and tracking info." A blue "Continue Shopping" button is visible. At the bottom, a link to "Print receipt" is present.

Google Pay supports Strong Customer Authentication [3DS2](#).

## Samsung Pay

### Introduction:

Samsung Pay is distinguished both by cutting edge technology as well as backward compatibility that makes acceptance easy for everyone. Apple Pay, Google Pay and Samsung Pay are all digital wallets that use NFC, which stands for near-field communications. NFC makes secure data transmission from a mobile device to a point of sale (POS) system possible.

### Pre-requisites

- User should have Samsung Pay enabled mobile device, even for PC payments
- Acquirer/Issuer must support tokenized transactions for In-App as per card network specifications
- The domain name and development IP address should be whitelisted from the Samsung server
- Worldpay to enable Samsung Pay on your account

### Facts

- Support for PC and mobile browser-based payments, using cards tokenized on mobile device user identification and device binding. This is based on Samsung account ID (email ID)
- Require server-to-server integration between Samsung and the partner's backend server
- User authentication and payment credential generation occurs in the user device

### Payment through PC Web

You can provide a *Samsung pay* option for payment on your web site. The user selects *Samsung pay* option to pay. The payment requesting push message arrives in the user's device and the payment can be confirmed by user authentication. The generated payment cryptogram and data is passed to your system. Then it is passed to the PG (Payment Gateway) and card network side for transaction approval.

### Integration preparation

For onboarding as a new partner of the Samsung Pay web checkout service, give the information below to the Samsung Pay team so that they can register it at the admin portal. After registration, the Samsung Pay team

will give you your “service ID.” Use the service ID to integrate with the Samsung Pay web checkout APIs and web checkout UI.

**Service Name:**

Give PG or Merchant service name.

**Domains:**

This is used for verifying the server-to-server API call. The Samsung web checkout API server uses this field to compare the domain or IP that calls the API. If they do not match, the transaction creation fails.

**CSR:**

Give the CSR (Public) file to the Samsung Pay team. If you have separate files for both the development and production environment, give these two files together. The Samsung Pay team use the admin portal to register it. Payment credential data is encrypted using this CSR.

**Development server Ips:**

Give your development server IPs – this is to register them in the firewall exception list in the Samsung dev. environment. Once registered, the Web UI and web checkout API server in the Samsung development environment are opened for these IP addresses.

**Production server Ips:**

Give your production server IPs – this is to register them in the firewall exception list in the Samsung production environment for server-to-server connection. Once registered, the Web checkout API server is opened for these IP addresses.

**Developer Ips:**

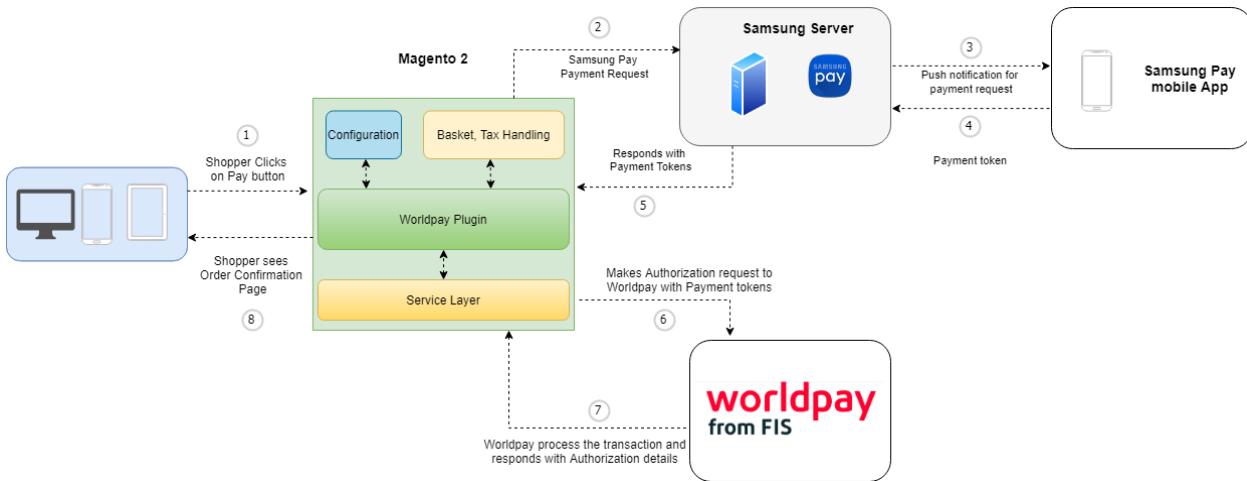

For testing, developers must manually call web checkout APIs. To support this, Samsung need the developers’ IP addresses from your side. These should be external IP addresses such as proxy server IP. Then Samsung team will also register them.

After doing this registration task, the Samsung team will give you your **service ID** for the web checkout service. Service ID is very important because it is used for the whole flow of web checkout service. The Samsung team will give two service IDs, one is for development environment and the other one is for production environment.

**Service ID:**

Unique identifier for identifying your system in Samsung web checkout service. It is used for the whole flow of the web checkout service. Read this document for information and keep it for reference.

**Architectural Diagram:**

1. Web checkout initiates the Samsung Pay wallet.
2. Samsung Pay returns the encrypted payload following shopper authentication.
3. The plugin sends the encrypted payload to your server.
4. The plugin sends an XML Direct request to Worldpay containing the encrypted Samsung Pay data.
5. Worldpay sends the Authorization response.
6. The plugin informs the shopper of the outcome (order success / failure).

## Admin Configuration:

You can find the Samsung Pay admin configuration under mobile wallets in Admin/Store/Configuration/Sales/Worldpay/Mobile Wallet/Samsung Pay

### Samsung Pay

Enabled [store view]	Yes
Service Id [store view]	4ddf389a8702a24e33a878
Samsung Merchant Shop Name [store view]	Worldpay Shop
Samsung Order Description [store view]	Test Samsung Order
Samsung Merchant Shop URL [store view]	dev.myshop.com

You can enable/disable from the above configuration

Note: Limited Card Brands (Visa and MasterCard) supported by Worldpay plugin currently.

### Test / Live mode:

You can change the environment in General Configuration section,

## General Configuration

Enable Worldpay  
[store view] Yes

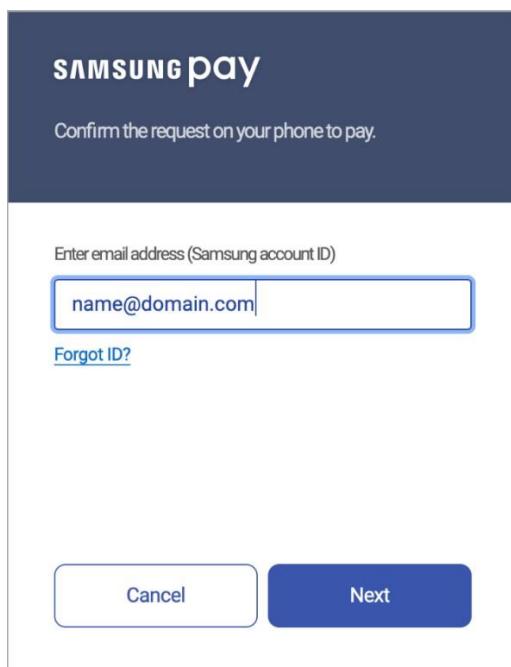

If set to "Yes", Worldpay will be available as a payment method.

Environment Mode  
[store view]  Test Mode  Live Mode

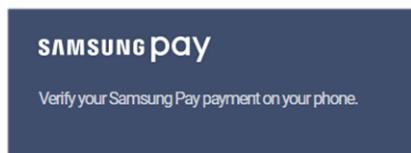

You don't need to change the API URL, it will be changed based on this selection.

## The Shopper experience

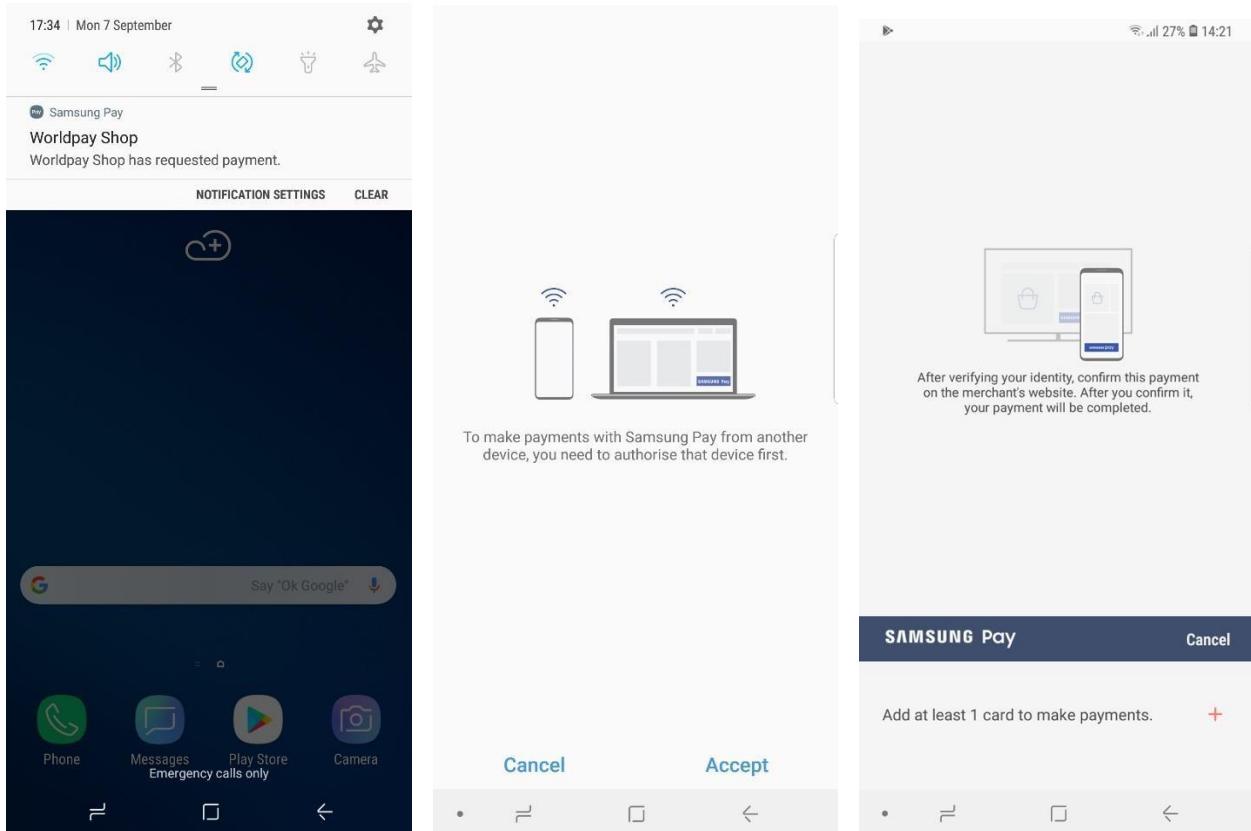

1. Place order using Samsung Pay from the Magento checkout page.
  
2. Once authentication is successful, the shopper is redirected to Samsung Pay page.

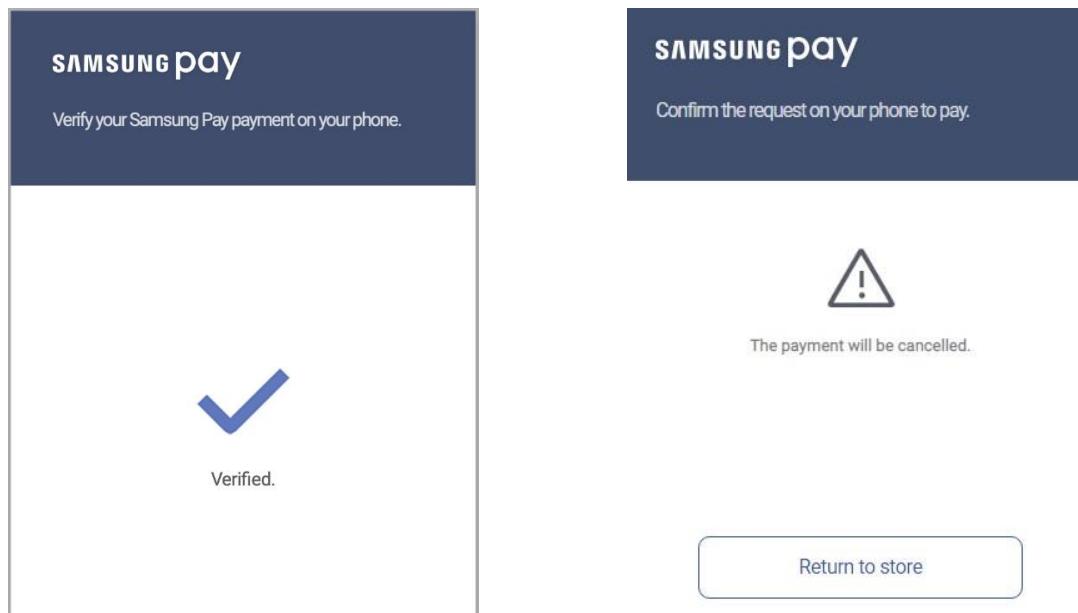

3. After submitting Samsung account ID, Samsung checks for the registered device under that account ID and triggers a push notification to that device. The User has to accept/reject the payment in 5 minutes before this expires.

4. a: Push notification triggered to Samsung phone.
- b: Need to authorize the device on Samsung phone.

5. Add a card to make the payment and if a card is already available please continue with the payment using Samsung Pay PIN. Supported card brands are Visa and MasterCard.
6. Payment can be accepted and verified or it can be rejected.

7. The payment is verified now so the user is redirected to the shop page with a success message,

8. You can see the order in Magento admin in Sales/order,

## Payment Information

### Wallets

The order was placed using USD.

## Chrome Pay: payment request API

This feature is experiencing issues with Chrome version 100 and above. We will release the patch for the same later.

To speed up the checkout process, Chrome Pay collects saved data from the Google Chrome browser and displays that data within checkout forms.

Shoppers see a single pop-up window that they use to confirm or change their details (billing and shipping address, and their choice of saved credit cards).

To configure Chrome Pay, go to Store/Configuration/Sales/Worldpay/Google Chrome Payment Request API.

## Google Chrome Payment service API

<b>Enable Chrome Pay</b>	[store view]	No	▼
--------------------------	--------------	----	---

<b>Chrome Pay Button Name</b>	[store view]	Buy Now
-------------------------------	--------------	---------

Configuration	Description
<b>Enable Chrome Pay</b>	If set to <b>Yes</b> , Chrome Pay is available in the shopper's cart.
<b>Chrome Pay Button Name</b>	Customize the <b>Button</b> label to access Chrome Pay.

**Note:** The Chrome Payment Request API only works if the integration mode is set to Direct at Store/Configuration/Sales/Worldpay/Credit Cards

Once Chrome Pay is enabled, shoppers see a **Buy Now** button in their cart, as shown below:

### Shopping Cart

The screenshot shows a shopping cart page. On the left, there is a product listing for a "Rival Field Messenger" bag, showing a small image, the name, price (€100.00), quantity (1), and subtotal (€100.00). Below the product is a "Move to Wishlist" link and edit/delete icons. On the right, there is a "Summary" section with a dropdown for "Estimate Shipping and Tax". The summary table includes Subtotal (€100.00), Shipping (Flat Rate - Fixed) (€5.00), and Order Total (€105.00). At the bottom of the summary section are two buttons: "Proceed to Checkout" and "Buy Now".

When the shopper clicks **Buy Now**, the Chrome payment request API displays the pop-ups shown below:

## Review your payment

3. Enter their CVC details to confirm the payment.

### Chrome Pay 3DS-2

The Chrome Payment services API supports strong customer authentication [3DS2](#).

### MOTO payments

This feature enables call center staff to place mail-order and telephone orders on behalf of shoppers. It only supports direct credit card integration, with no 3D secure authentication.

#### MOTO

The screenshot shows the 'MOTO' configuration page. It includes fields for 'Enabled' (set to 'Yes'), 'Moto Integration Mode' (set to 'Direct'), 'Moto Merchant Code' (containing a placeholder merchant code), 'Moto Username' (containing a placeholder username), 'Moto Password' (containing a placeholder password), and a 'Payment Methods' dropdown menu listing various payment types like American Express, Visa, MasterCard, etc. Below the form is a title field containing 'Mail Order Telephone Order'.

**Note:** MOTO payments support hosted payment pages, which have a high level of PCI DSS compliance. However, the current version does not support client-side encryption or 3DS for direct integration, which have a low level of PCI DSS compliance.

Configuration	Description
<b>Enabled</b>	If set to Yes, MOTO payments are available for order processing in the Magento admin area.
<b>Moto Integration Mode</b>	We only support direct integration even though HPP/redirect integration is enabled for shopper's credit card journey.
<b>Moto Merchant Code</b>	Enter the merchant code for MOTO orders. If it is blank, global merchant code entered under General configuration will be applicable.

<b>Moto Username</b>	Enter the username for this MOTO specific Merchant code. If it is blank, global XML username entered under General configuration will be applicable.
<b>Moto Password</b>	Enter the password for this MOTO specific Merchant code. If it is blank, global XML password entered under General configuration will be applicable.
<b>Payment Methods</b>	Select the credit cards that are available to admin users in a dropdown.
<b>Title</b>	Write the title that admin users see in the admin panel.

**Note:** To process a non-3DS payment, add Moto merchant code, username, and password details. You can reach out to Worldpay and request a separate merchant code to process a non-3DS payment..

## The shopper's experience

In the Magento admin area, in-store staff can generate MOTO payments as follows.

### Payment Method

#### Get available payment methods

- When you select the billing country in the billing address, click **Get available payment methods**.

#### Payment Method

- Check / Money order
- Moto

- You can then select *MOTO* from the available payment methods.

## Payment Method

- Check / Money order  
 Moto

Credit Card Type \*

Card Holder name \*

Credit Card Number \*

Expiration Date \*

Month	<input type="button" value="▼"/>
Year	<input type="button" value="▼"/>

<b>Payment Methods</b>	The alternative payment methods you select are available for payment processing during checkout.

## Dynamic narratives

Statement narrative is added to all the APMs that Worldpay supports. It is the narrative that appears on the shopper's statement, as well as the web page of some banks.

## The shopper's experience

There is a new text area where the shopper can add a narrative (max 255 characters) under the label *Purpose of transaction*:

Alternative Payment Methods

We Accept

Purpose of transaction

**Purpose of transaction** will reflect on your statement, only if it is supported by the selected payment method.  
**Purpose of transaction** will be validated by the payment method before processing.  
Please adhere to the **Statement Narrative** guidelines of the selected payment method before entering the **Purpose of transaction**.

My billing and shipping address are the same  
Uma s  
1234 Elmwood Valley  
Blissful, Virginia 21109  
United States  
[REDACTED]

**PLACE ORDER**

## Payment XML changes

Worldpay supports 13 APMs:

PayPal, IDEAL, Klarna, Mistercash/Bancontact, Union Pay, P24, Yandex.Money, AliPay, SoFort EU, GiroPay, Boleto Bancario, SEPA (one-off transactions), and Qiwi.

They all have the following element added to the order node in the payment service request xml:

```
<statementNarrative>MERCHANT STATEMENT NARRATIVE</statementNarrative>
```

The *Ideal* APM expects the narrative to be passed in the description node within the order node, limited to a maximum of 35 characters.

## KLARNA

Klarna is a buy now, pay later payment method that provides a fast checkout process.

**KLARNA** payment methods are currently part of a Beta Release. Worldpay strongly recommends that you contact your Worldpay Relationship Manager (RM) or Worldpay Support or Implementation before implementation/testing is begun. This allows Worldpay to provide appropriate support during the integration to ensure everything works correctly.

There are three different product types that define when and how your shopper pays.

Value	Description	Countries Available in
<b>KLARNA_SLICEIT-SSL</b>	The shopper pays in instalments. During boarding, you agree with Klarna the terms of the instalment timeframes.	SE, NO, FI, DE, AT, UK, DK, US
<b>KLARNA_PAYLATER-SSL</b>	The shopper pays within a specified timeframe. This timeframe is 30 days for UK/ US and 14 days for Europe.	SE, NO, FI, DE, NL, AT, CH, UK, DK, US
<b>KLARNA_PAYNOW-SSL</b>	The shopper pays the full amount immediately by bank transfer.	SE, DE, NL, AT

**NOTE:** Shoppers can only see the available Klarna payment methods in their respective countries (see the above table). This is when the shopper's billing country matches the site locale. See the portal [documentation](#) for the latest information on the countries available.

### Klarna configurations

To configure Klarna, do the following:

1. Go to: Stores> Configuration> Sales> Worldpay> Klarna

The screenshot shows the Klarna configuration page in the Magento 2 Admin Panel. On the left, there's a sidebar with various payment method categories. The 'Klarna' category is selected. In the main content area, there's a dropdown labeled 'Enabled [store view]' with 'Yes' selected. Below it is a section titled 'Klarna Allowed Countries' with a dropdown menu showing a list of countries. The 'United Kingdom' and 'United States' are highlighted in grey, indicating they are selected. At the bottom, there are two configuration links: 'Configure Klarna PayLater' and 'Configure Klarna PayNow'.

 Configure Klarna PayLater

United Kingdom

2. Use the information in the table below to complete the configuration.

Configuration	Description
<b>Enabled</b>	When set to Yes, Klarna is available at checkout.
<b>Klarna Allowed Countries</b>	Countries supporting Klarna currently are SE, NO, FI, DE, NL, AT, CH, UK, DK, US.
<b>Configure Klarna PayLater</b>	Klarna Paylater countries: SE, NO, FI, DE, NL, AT, CH, UK, DK, US. Subscription days: 30 days for UK/ US and 14 days for Europe.
<b>Configure Klarna PayNow</b>	Klarna Paynow countries: SE, DE, NL, AT.
<b>Configure Klarna Sliceit</b>	Klarna Sliceit countries: SE, NO, FI, DE, AT, UK, DK, US.

3. Follow these steps to add the configurations to manage alerts/show customized messages:

- i. Go to **Store/Settings/Configuration/Sales/Worldpay Exception Codes** ii. Under **Customize Checkout Messages**, click the add button and add the configurations below.

AKLR01	Klarna payment method is currently not available for this country.	
--------	--	--

**Add**

- iii. Click **save config** after adding the configurations. iv. Use the information in the table below to add the configurations above.

Message Code	Actual Message	Custom Message
AKLR01	Klarna payment method is currently not available for this country.	

- v. Under **Customize Admin Worldpay Configuration Messages**, you must click on **add** button and then add the below configurations.

AAKL01	Please create Shipment with single tracking number.	
AAKL02	Multi shipping is currently not available, please add single tracking number.	
AAKL03	Tracking number can not be blank, please add.	
<input type="button" value="Add"/>		

- vi. Click **save config** after you add the configurations.

Use the table below to add the configurations above.

Message Code	Actual Message	Custom Message
AAKL01	Please create Shipment with single tracking	

	number .	
<b>AAKLO 2</b>	Multi shipping is currently not available, please add single tracking number. .	
<b>AAKLO 3</b>	Tracking number cannot be blank, please add.	

4. In some cases, you may want to make capture/partial capture request. Do the following:
- To make capture / partial capture request, go to **Sales/Orders**.
  - Search for the order ID shared by the shopper (For example: 000001415.).

ID	Purchase Point	Purchase Date	Bill-to Name	Ship-to Name	Grand Total (Base)	Grand Total (Purchased)	Status	Action	Allocated sources	Braintree Transaction Source	Worldpay FraudSight Message
000001415	Main Website Main Website Store Default Store View	Jun 7, 2021 7:53:39 AM	Veronica Costello Costello	Veronica Costello Costello	\$123.41	\$123.41	Pending	<a href="#">View</a>			

- Click **View**, and the page below appears with the option 'Invoice' to capture/partial capture request.

← Back    Login as Customer    Sync Status    Cancel    Send Email    Hold    Invoice    Ship    Reorder    **Edit**

ORDER VIEW		Order & Account Information	
Information		Order # 000001415 (The order confirmation email is not sent)

iv. Points to remember when you create the Invoice:

1. It is compulsory to create an invoice with a tracking number, except for digital items (For example, downloadable videos, digital gift cards and bundle items, when you wish to ship together).

Note: Magento will not let you create shipment for orders with bundle items (where bundle items are selected ship 'together' in catalog > products > ordered bundle item). Please follow below steps to create invoice with shipment:

- Go to in catalog > products > search ordered bundle items > click on edit.

ID ↓	Thumbnail	Name	Type	Attribute Set	SKU	Price	Quantity	Salable Quantity	Visibility	Status	Websites	Action
52		Sprite Yoga Companion Kit	Bundle Product	Gear	24-WG080		0.0000		Catalog, Search	Enabled	Main Website	<a href="#">Edit</a>

- Select bundle items group > select ship Bundle items Separately, as below

#### Bundle Items

Save the changes and, go to **System** and do update **Index management** and flush **cache management**.

2. Tracking number should be created by selecting 'create shipment' option on invoice page and not using 'Ship' option on Order view page.

Note: You cannot create multiple tracking numbers, as we do not currently support multi shipment.

## How to configure instant purchase

Use this feature to enable Instant Purchase on product-detail pages. This feature is for credit and debit cards only on the Worldpay gateway.

Note – Magento 2 core vault data model has been updated with token generated by Worldpay.

## How to set up Instant Purchase

1. Go to Stores/Configuration/Sales/Instant Purchase and enable the default Magento option for Instant Purchase:

### Instant Purchase

Enabled [store view]	<input type="text" value="Yes"/>	<input checked="" type="checkbox"/> Use system value
Payment method with vault and instant purchase support should be enabled.		
Button Text [store view]	<input type="text" value="Instant Purchase"/>	<input checked="" type="checkbox"/> Use system value

2. Go to Stores/Configuration/Sales/Worldpay/Quick checkout and enable *Instant Page Checkout*.

## Instant Purchase with Worldpay

Enable Instant Page Checkout  
[store view]

Yes

If set to "Yes", Worldpay as payment method will be available during Instant purchase.

### The shopper's experience

1. If the shopper has saved their credit card in the *My Account* section based on previously placed orders, go to Store front/login/Product Details Page.
2. Once on the page, click **Instant Purchase**.

## Olivia 1/4 Zip Light Jacket

Be the first to review this product

#### Size

#### Color

#### Qty

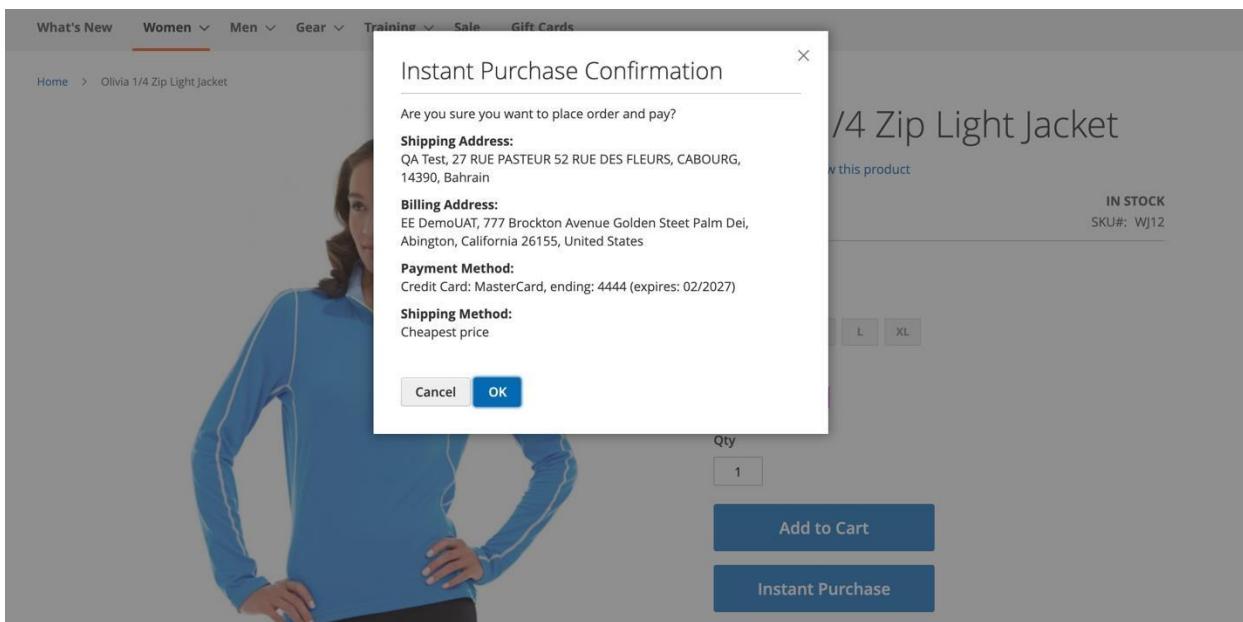

1

**Add to Cart**

**Instant Purchase**

ADD TO WISH LIST | ADD TO COMPARE

3. An Instant Purchase window opens, with the shipping and billing addresses set as default, along with the payment method.

4. The order is placed directly from the product-detail page:

Worldpay plugin feature for Instant page checkout supports Strong Customer Authentication [3DS2](#).

## Multiple partial capture

Worldpay supports partial payment capture for credit card and mobile wallet orders and PayPal.

In general, a payment can only have funds captured once, and that applies to partial captures too. If you make a partial capture, the rest of the authorization is cancelled. To capture the remaining amount, you must submit a new order to the Worldpay payment service for authorization.

**Prerequisite:** Worldpay supports one-time partial captures by default. For multiple partial captures you must ask Worldpay to enable multiple partial capture for your account.

## Implementing multiple partial capture

You can enable or disable multiple partial capture in Stores/Configuration/Sales/Worldpay.

1. Go to Stores/Configuration/Sales/Worldpay/General Configuration and set Auto Invoice to No. (If it is set to Yes, a full capture request is sent to Worldpay automatically from the Magento side).

### General Configuration

Enable Worldpay [store view]	Yes
Environment Mode [store view]	Test Mode
Test URL [store view]	https://secure-test.worldpay.com/jsp/merchant/xm
Live URL [store view]	https://secure.worldpay.com/jsp/merchant/xml/pay
Merchant Code [store view]	SAPIENTNITROECOMMERCEV1
XML Username [store view]	MHAF6P5ABWKKIMAKLYXM
XML Password [store view]	.....
Enabled Logging [store view]	Yes
Auto Invoice [store view]	No

2. Go to Stores/Configuration/Sales/Worldpay/Multiple Partial Capture and set *Partial Capture* to **Yes**. This enables partial captures to be made multiple times at the line-item level within a single order.

## How to execute partial capture from Magento

Go to Sales/Orders:

ID	Purchase Point	Purchase Date	Bill-to Name	Ship-to Name	Grand Total (Base)	Grand Total (Purchased)	Status
000000008	Main Website Main Website Store Default Store View	Feb 28, 2020 6:05:15 AM	Magent upgrade	Magent upgrade	\$653.40	\$653.40	Pending
000000030	Main Website Main Website Store Default Store View	Mar 4, 2020 3:01:44 AM	Magent upgrade	Magent upgrade	\$68.00	\$68.00	Pending

1. Click and open an order with *Pending* status. Click **Invoice** to prepare for partial or full capture:

The screenshot shows the 'Items Ordered' section of the order view. The 'Invoice' button is circled in red.

Product	Item Status	Original Price	Price	Qty	Subtotal	Tax Amount	Tax Percent	Discount Amount	Row Total
Olivia 1/4 Zip Light Jacket	Ordered	\$77.00	\$77.00	Ordered 4	\$308.00	\$0.00	0%	\$61.60	\$246.40

SKU: WJ12-S-Blue  
Size: S  
Color: Blue

Notice that the **Qty** (quantity) **Ordered** is 4 but that the **Qty to Invoice** is an editable field. This is for partial capture and invoicing.

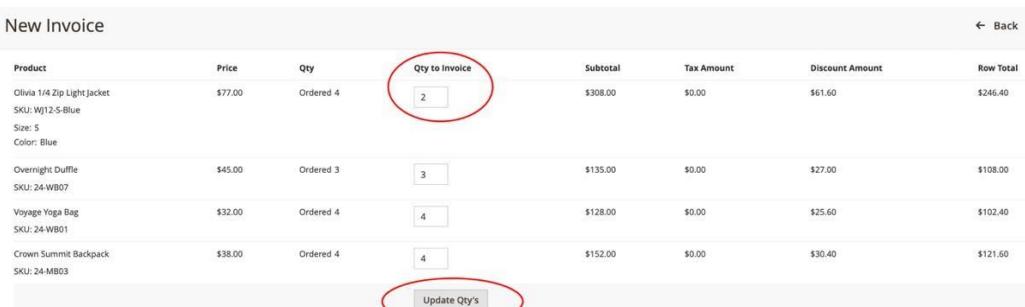

The screenshot shows the 'Items to Invoice' section of the new invoice page. The 'Qty to Invoice' field for the first item is circled in red.

Product	Price	Qty	Qty to Invoice	Subtotal	Tax Amount	Discount Amount	Row Total
Olivia 1/4 Zip Light Jacket	\$77.00	Ordered 4	4	\$308.00	\$0.00	\$61.60	\$246.40

SKU: WJ12-S-Blue  
Size: S  
Color: Blue

Below, the **Qty to Invoice** is updated to 2 and the **Update Qty's** button is enabled:

The screenshot shows the 'New Invoice' page with the 'Qty to Invoice' field for the first item updated to 2. The 'Update Qty's' button is circled in red.

Product	Price	Qty	Qty to Invoice	Subtotal	Tax Amount	Discount Amount	Row Total
Olivia 1/4 Zip Light Jacket	\$77.00	Ordered 4	2	\$308.00	\$0.00	\$61.60	\$246.40
Overnight Duffle	\$45.00	Ordered 3	3	\$135.00	\$0.00	\$27.00	\$108.00
Voyage Yoga Bag	\$32.00	Ordered 4	4	\$128.00	\$0.00	\$25.60	\$102.40
Crown Summit Backpack	\$38.00	Ordered 4	4	\$152.00	\$0.00	\$30.40	\$121.60

Shown below, with the quantity to be invoiced/captured updated to 2, the corresponding *Subtotal*, *Discount Amount* and *Row Total* also automatically update. The **Submit Invoice** button is enabled to start the invoice/capture.

Items to Invoice						
Product	Price	Qty	Qty to Invoice	Subtotal	Tax Amount	Discount Amount

<b>Grand Total</b>	<b>\$530.20</b>													
		<input type="checkbox"/> Capture Online <input type="checkbox"/> Append Comments <input type="checkbox"/> Email Copy of Invoice <span style="background-color: orange; border-radius: 10px; padding: 2px 10px; color: white; font-weight: bold;">Submit Invoice</span>												

**Note:** Worldpay supports partial capture for payments made by credit card (Direct/HPP), PayPal, Google Pay and Apple Pay.

## Merchant profile override

This enables you to override the global merchant profile (Worldpay Merchant code) based on payment method. If the override is not set, then Magento uses the global merchant profile for all transactions.

To configure these settings, go to Stores/Configuration/Sales/Worldpay/Merchant Profile Override Configuration:

Merchant Profile Override Configuration

Merchant Profile Configuration [store view]		Payment Method	Merchant Code	Merchant Username	Merchant Password	Action
AliPay						
PayPal						
<b>Add</b>						

This enables you to use a different merchant code to process PayPal and AliPay orders.

## How to synchronize order status with Worldpay

To synchronize order status with Worldpay, use the following configurations:

Configuration	Description
<b>Sync Order With Status</b>	You must select the Magento order status to be available for status synchronization with Worldpay status.
<b>Time Window</b>	You must set <i>n Number of hours</i> . All orders placed in last n number of hours are considered for this synchronization.

## Synchronize Order Status

**Sync Order With Status**  
[store view]

Pending  
Processing  
Canceled  
Complete

**Time window**  
[store view]

24

Orders placed within the entered hours will be considered for synchronization.

**Note:** This job will synchronize the order status with Worldpay for all orders placed in past 24 hours except those been placed in past 30 minutes:

**Job Group:** *worldpay\_orders*

**Job Name:** *order\_sync\_status*

During a rare fail-over of the notification channel update, Magento might not update orders as expected. You can set up a cron job to update them as a fail-over mechanism.

Cron jobs can update and synchronise any type of order (direct, redirect, MOTO, etc) on the Worldpay server. This is provided that the order was placed during the past 24 hours. However, you cannot update cancelled orders with a cron job.

### Executing the cron job for Worldpay-specific orders

During normal operation, Magento includes plenty of cron jobs. You can run all the cron groups, or you can run single groups. To avoid running all the groups, run the *Worldpay\_orders* group. This updates Worldpay orders only. Run the command below to execute the script that will update only Worldpay orders:

```
php bin/magento cron:run --group="worldpay_orders"
```

When the job is done you see the results in the CLI screen:

```
magento@ip-172-31-28-8:/var/www/html/webroot$ php bin/magento cron:run --group="worldpay_orders"
Ran jobs by schedule.
magento@ip-172-31-28-8:/var/www/html/webroot$ % Total    % Received % Xferd  Average Speed   Time   Time   Time  Current
100 2678  100 2355  100  323      2029    278  0:00:01  0:00:01 --::-- 2030
% Total    % Received % Xferd  Average Speed   Time   Time   Time  Current
Dload Upload Total    Spent   Left  Speed
100 1636  100 1313  100  323      2035    500  --::--  --::--  --::-- 2035
% Total    % Received % Xferd  Average Speed   Time   Time   Time  Current
Dload Upload Total    Spent   Left  Speed
100  929  100   465  100   464      752    750  --::--  --::--  --::-- 751
```

For more details about order inquiries, please visit the [Worldpay support site](#).

## How to set up cron jobs in periodic time

To schedule cron jobs in periodic time, you must set them up on your server. First, use this command line to configure cron:

```
crontab -e
```

You can use the following command to execute a Worldpay cron job every minute (adding in your php.ini file path where indicated).

```
* / * * * * php -c {php.ini_path} {magento_path}/bin/magento cron:run-
group="worldpay_orders"
```

You can adjust the time setting to suit your requirements.

## Dynamic currency exponents

Use this feature to configure the expected exponent value for different currencies. This value applies when sending requests to Worldpay.

**Note:** The exponent value determines how many decimal places there are when processing a currency. For example GBP has an exponent value of 2.

## How to setup dynamic exponent

Go to Stores/Configuration/Sales/Worldpay/Miscellaneous:

## Miscellaneous

<b>Country Codes</b> [store view]	<input type="text" value="JE-GB"/>
--------------------------------------	------------------------------------

Note: Map the refused country code with accepted country code. e.g. JE-GB, JE (Jersey) is refused country code by worldpay and it is mapped to GB (Great Britain).

<b>Global Currency Exponent</b> [store view]	<input type="text" value="2"/>
---	--------------------------------

Use system value

<b>Override Global Currency Exponent</b> [store view]	<input type="text" value="Yes"/>
--	----------------------------------

Note: Enabling this option allows you to override the global currency exponent for a particular currency code using the below grid.

Currency Code Exponents [store view]	Currency Code	Currency	Exponent	Action
	BEF	Belgian Franc	0	
	XOF	CFA Franc BCEAO	0	
	XAF	CFA Franc BEAC	0	

Configuration	Description
<b>Global Currency Exponent</b>	You can define a global value that applies to all currencies.
<b>Use system value</b>	The default exponent defined at the Worldpay end is 2. Select this option, to define the global value as 2.
<b>Override Global Currency Exponent</b>	Enable this option to override the global exponent value for any particular currency.
<b>Currency Code Exponents</b>	Use this feature to configure exponents to various currencies. This configuration is applied only when <i>Override Global Currency Exponent</i> is enabled. Currency which is not added to this list will take global exponent value 2.

## How to setup currency code exponents

Go to Stores/Configuration/Sales/Worldpay/Miscellaneous/ Currency Code Exponents

**Currency Code Exponents**  
[store view]

Currency Code	Currency	Exponent	Action
BEF	Belgian Franc	0	
XOF	CFA Franc BCEAO	0	
XAF	CFA Franc BEAC	0	
XPF	CFP Franc	0	
KMF	Comoro Franc	0	
GRD	Greek Drachma	0	
GNF	Guinea Franc	0	
HUF	Hungarian Forint	0	
IDR	Indonesian Rupiah	0	

Configuration	Description
<b>Currency Code</b>	A unique ISO currency code, used by the worldwide payment gateway.
<b>Currency</b>	A unique ISO currency name, used by the worldwide payment gateway.
<b>Exponent</b>	This enables you to configure the exponent value for each currency.
<b>Action</b>	If you need to add a new currency code exponent during future development, a delete icon appears so you can delete the incorrect new value.

**Note:** For more details, [read the online guide to currency exponents](#).

## Subscriptions and recurring payments

You can use the plugin to configure different subscription plans (weekly/monthly/quarterly, etc) at a product level. Your shoppers can then place orders by subscribing to the associated payment plans.

## How to configure subscription and payment plans

**Prerequisite:** Ask Worldpay to activate recurring payments on your merchant code.

To configure subscriptions:

1. Go to Stores/Configuration/Sales/Worldpay/Subscription Settings and set *Subscriptions Enabled* to **Yes**.

### Subscription Settings

Subscriptions Enabled [store view]	<input type="text" value="Yes"/>
Before enabling, make sure you connect with Worldpay contact.	
End Date Enabled [store view]	<input type="text" value="Yes"/>
Enable Recurring Email [store view]	<input type="text" value="No"/>
Main Label for Subscription [store view]	<input type="text" value="Subscribe and Save"/>
Subscription Checkbox Label [store view]	<input type="text" value="Add the product to Subscription"/>
Start Date Label [store view]	<input type="text" value="Start Date"/>
End Date Label [store view]	<input type="text" value="End Date"/>

2. Go to Catalog/Products. Open a product and expand the *Subscriptions* section:

Kenobi Trail Jacket-XS-Black

**Gift Options**

**Subscriptions**

**Enabled** [website] Yes

**Allow Selectable Start Date** [website] Yes

**Payment Plans**

**Add Payment Plan**

Configuration	Description
<b>Enabled</b>	If set to Yes, subscription is enabled at product level.
<b>Allow Selectable Start Date</b>	If set to Yes, the shopper can set a start date for the subscription to begin.
<b>Add Payment Plan</b>	Click to add payment plans for the shopper to subscribe to.

3. Click **Add Payment Plan** to create a payment plan the shopper can subscribe to:

Add Payment Plan

Active  Yes

Code \*

Automatically prepended with product id plus underscore to help with uniqueness, total length should not exceed 25 characters.

Description

Maximum 100 chars.

Recurring Cycle \*

Recurring Amount \*

Website

Configuration	Description
<b>Active</b>	If set to Yes, the subscription is enabled at product level.
<b>Code</b>	The code retains the payment plan's uniqueness. If the code entered is a monthly plan then the final sample code is Product ID_monthly-plan to maintain uniqueness.
<b>Description</b>	An optional field to describe the payment plan.
<b>Recurring Cycle</b>	Select a cycle (weekly / monthly / quarterly / semiannually / annually). Future orders and payment capture are executed based on the cycle.
<b>Recurring Amount</b>	The recurring amount overrides the product price if the shopper opts for subscriptions.
<b>Website</b>	This payment plan is applicable to the whole website. (Default option.)

4. After you create the payment plan, the plan appears in the *Subscription* section. To change the order of payment plans, use Magento's drag-and-drop feature.

Subscriptions 

Enabled  Yes

Allow Selectable Start Date  Yes

#### Payment Plans

Code	Description	Recurring Cycle	Recurring Amount	Website	Active
5_Monthly Plan	Recurring Plan	Monthly	40.00	All Websites [EUR] 	<input checked="" type="checkbox"/>

Apply Discount Code 

On the product-detail page, the shopper can select a payment plan. If the shopper selects Add a Payment Plan, all the active payment plans created under How to configure subscription and payment plans will be available.

The product price is updated based on the selected plan (as you can see above), and the shopper can set the subscription start date/end date if this is enabled. (How to configure subscription and payment plans). The shopper can then complete the subscription after adding the product to their cart.

The shopper can see their subscription orders in My Account/My Subscriptions, where they can edit or cancel subscriptions and update their address.

## My Subscriptions

Original Order #	Original Order Date	Product	Amount	Interval	Start Date	End Date	Status	Actions
000001931	12/15/20	Push It Messenger Bag	€5.00	Weekly	12/15/20	12/22/20	Active	<a href="#">Edit</a>   <a href="#">Cancel</a>
000000710	9/4/20	Compete Track Tote	€15.00	Weekly	9/29/20	9/29/20	Active	<a href="#">Edit</a>   <a href="#">Cancel</a>

2 Item(s) Show

## Recurring orders

When a subscription order is placed using stored credentials/tokenization, then all future orders and transactions related to that subscription are handled as recurring orders.

Shoppers cannot place a subscription order unless they select the Save Your Card option. This prompts Worldpay to create an authorization token. Magento saves this token for future recurring orders.

## My Orders

Order #	Date	Ship To	Order Total	Status	Action
000001297	6/24/20	Veronica Costello	€34.00	Pending	<a href="#">View Order</a>
000001295	6/24/20	Veronica Costello	€34.00	Pending	<a href="#">View Order</a>
000001294	6/24/20	Veronica Costello	€34.00	Pending	<a href="#">View Order</a>

To set up recurring orders:

1. You must set up the cron job `worldpay_recurring_transactions` to run every 24 hours.

This cron job checks all the subscriptions whose start date or next order date are queued over the next five days. The job creates recurring orders for all the subscriptions.

Once Magento creates a recurring order, it sends an authorization request to Worldpay and, if successful, follow-up capture requests are triggered. After successful capturing/invoicing, recurring orders are fulfilled.

## Country-code spoofing

Worldpay payments are based on country codes, and if a country's code is not accepted by Worldpay, then no payment methods appear in the checkout page. To overcome this, there is a country-code spoofing option.

Use this option to override a refused country code by mapping it to an accepted country code.

## How does it work?

Magento assigns a country code to orders based on the customer's billing address. Worldpay then fetches the accepted payment methods for that country code.

Because Worldpay does not recognize country codes for areas such as Jersey (JE) and the Isle of Man (IM), you can opt to implement country-code spoofing. This ensures that a refused country code is mapped to an accepted country code.

To configure this, go to: Stores/Configuration/Sales/Worldpay/Miscellaneous:

### Miscellaneous

Country Codes [store view]	JE-GB
Note: Map the refused country code with accepted country code. e.g. JE-GB, JE (Jersey) is refused country code by worldpay and it is mapped to GB (Great Britain).	

As shown above, enter the text **JE-GB** where JE is the refused code and GB is the code you want to map. To enter multiple country-code spoofs, separate your entries with commas.

If an order is placed with a refused country code, the shopper sees the error message below:

 paymentOptionsInquiry: countryCode 'JE' is not supported

## Configurable alert messages

With this feature you can customize various alert messages that appear during checkout and in the My Account and Admin sections.

### How to set up configurable alerts

Go to Stores/Configuration/Sales/Worldpay Exception Codes to choose the types of alerts you want to customize:

Customize Account Level Messages

Customize Admin Worldpay Configuration Messages

Customize Checkout Messages

- Customize Account Level Messages:** Customize the messages shoppers see in their My Account section
- Customize Admin Worldpay Configuration Messages:** Customize admin-level messages
- Customize Checkout Messages:** Customize the messages shoppers see during checkout These three sections have identical configuration panels:

Customize Account Level Messages

Configurable Alert Messages [store view]			
Message Code	Actual Message	Custom Message	Action
MCAM0	You should login or register to buy a subscription.		
MCAM1	Choose any of the plan!		
MCAM2	Choose plan start date!		

Customize Admin Worldpay Configuration Messages

Configurable Alert Messages [store view]			
Message Code	Actual Message	Custom Message	Action
ACAM0	Something went wrong, please reload the page		
ACAM1	Plan code should not exceed 25 characters.		
ACAM2	Plan with such code already exists		

## Customize Checkout Messages

Configurable Alert Messages [Store view]		Message Code	Actual Message	Custom Message	Action
CCAM0	The card number entered is invalid.				
CCAM1	Card number should contain between 12 and 20 numeric characters.				
CCAM2	This card number cannot be used to place 3DS2 order now, please go and update this from My account first.				

Configuration	Description
<b>Message Code</b>	A unique code used within the script to assign the alert message. This is a mandatory field.
<b>Actual Message</b>	The default message that the plugin displays. This is a mandatory field.
<b>Custom Message</b>	Enter the text that will replace the default message. This is an optional field but it does not accept entries made of white spaces (space or tab).
<b>Action</b>	If you need to add a different message in future, a delete icon appears so that you can delete the current, incorrect message.

## The shopper's experience

Go to Storefront\Login/Add to Cart/Proceed to checkout:

### Actual message

Invalid credit card!!!

**Note:** This feature only applies to the Worldpay plugin. Magento messages are not affected.

## Extended response codes

If Worldpay has enabled them for you, these are the extended response codes you can get if Worldpay is your acquirer. There is also a feature at plugin level to override/customize the messages you receive from Worldpay.

## How to customize Worldpay response messages

Go to Stores/Configuration/Sales/Worldpay Exception Codes:

Extended Response Codes

Response Codes [store view]	Error Code	Worldpay Response	Custom Response	Action
	1	Refer to card issuer OR Referred, Call Authorisation Center		
	2	Refer to card issuer, special condition		

1. In the Extended Response Codes, you can review and customize the messages triggered by various response codes:

Configuration	Description
<b>Error Code</b>	The unique ISO code within the response sent by Worldpay.
<b>Worldpay Response</b>	The messages sent by Worldpay with each ISO code.
<b>Custom Response</b>	This enables you to override the messages Worldpay sends.
<b>Action</b>	If a new message is needed during any future development, a Delete icon appears so you can delete any old or incorrect messages.

## The shopper's experience

Go to Store front/login/Add to Cart/Proceed to Checkout.

## Configurable labels

This section describes how to customize labels shown to the user and shows developers how to implement these messages in the plugin.

1. To begin the configuration, go to Store/Settings/Configuration/Sales/Worldpay Custom Labels.

Checkout Labels	( 
My Account Labels	( 
Admin Labels	( 

You can configure labels as per the three sections provided; checkout labels, my account labels and admin labels.

### Checkout Labels

Use this screen to configure checkout labels:

Checkout Label [store view]	Label Code	Actual Label	Custom label	Action
	CO1	Credit Card Type		
	CO2	We Accept		
	CO3	Credit Card Number		

### My account labels

Use this screen to configure My account labels:

## My Account Labels

Label Code [store view]	Actual Label	Custom label	Action
AC2	Card Brand #		
AC3	Card Number		
AC4	Card Expiry Month		

## Admin labels

Use this screen to configure Admin labels:

## Admin Labels

Admin Label [store view]	Label Code	Actual Label	Custom label	Action
	AD3	Payment Plans		
	AD4	Code		
	AD5	Description		

Configuration	Description
<b>Label Code</b>	It is a unique code number assigned to labels.
<b>Actual Label</b>	This displays the default label description already available from Worldpay
<b>Custom Label</b>	This enables you to add a custom label description against actual label and this label will be displayed to the user.
<b>Action</b>	If new configuration is to be added by clicking the add button, there is an option to delete this configuration before clicking on save.

You can add a new configuration at the end of each section using the **ADD** button provided, once the admin/developer adds new configuration, as a developer you can further use it in the plugin.

### Example

As an example, consider the scenario below, the default label for credit card type as per our configuration is – *Credit Card Type*.

If you have not provided any custom label against this then the default label appears to the user.

Checkout Labels

Checkout Label [store view]	Label Code	Actual Label	Custom label	Action
	CO1	Credit Card Type		

Credit Cards
We Accept

---

**Credit Card Type \***

 
   
   
   
   
   
  Use Saved Card

*\*Saved Card feature will be available only if enabled by Merchant.*

My billing and shipping address are the same

Uma s  
  
  
 United States  

PLACE ORDER

If you have provided a custom label, then this custom label is shown to the user.
